Special Permit Conditions on Next Page

COMAL COUNTY

ENGINEER'S OFFICE

License to Operate On-Site Sewage Treatment and Disposal Facility

Issued This Date: **03/19/2024** Permit Number: **113610**

Location Description: 3660 TANGLEWOOD TRL
SPRING BRANCH, TX 78070

Subdivision:	Charles Murhart Survey ABS No. 404
Unit:	0
Lot:	0
Block:	0
Acreage:	14.2300

Type of System: Aerobic
Drip Irrigation

Issued to: Rebecca Creek Campgrounds

This license is authorization for the owner to operate and maintain a private facility at the location described in accordance to the rules and regulations for on-site sewerage facilities of Comal County, Texas, and the Texas Commission on Environmental Quality.

The license grants permission to operate the facility. It does not guarantee successful operation. It is the responsibility of the owner to maintain and operate the facility in a satisfactory manner.

Alterations to this permit including, but not limited to:

- Increase in the square feet of living area
- Increase in the number of bedrooms
- A change of use (i.e. residential to commercial)
- Relocation of system components (including the relocation of spray heads)
- Installation of landscaping
- Adding new structures to the system

may require a new permit. **It is the responsibility of the owner to apply for a new permit, if applicable.**

Inspection and licensing of a facility indicates only that the facility meets certain minimum requirements. It does not impede any governmental entity in taking the proper steps to prevent or control pollution, to abate nuisance, or to protect the public health.

This license to operate is valid for an indefinite period. The holder may transfer it to a succeeding owner, provided the facility has not been remodeled and is functioning properly.

Licensing Authority
Comal County Environmental Health

March 21, 2024

COMAL COUNTY

ENGINEER'S OFFICE

RE: ***3660 Tanglewood Trail***
Spring Branch, TX, 78070

Special Permit Conditions for Permit 113610

(Beginning at 03-19-2024)

A flow meter has been installed on the outflow line of the pump tank. As a condition of the License to Operate readings from this meter must be taken daily and recorded. The recorded daily readings must be submitted to the Comal County Environmental Health Office monthly beginning 30 days after the issuance of the License to Operate and continuing monthly every 30 days for 12 consecutive months. Failure to provide the required meter readings every month as indicated, or if at any time the daily meter readings are shown to exceed the total permitted flow of 1755 gallons per day, the License to Operate will be void and a new permit must be obtained.

If you have any questions, you can email me or call the office.

Thank You,

| **Brandon Olvera** | **Designated Representative OS0034792** |

OSSF Inspection Sheet

Installer Name: Marco Fernandez **OSSF Installer #:** OS0002409

1/18/24 JC see last page for notes

1st Inspection Date: 10/13/23 **2nd Inspection Date:** 1/4/24 **3rd Inspection Date:** 1/10/24

Inspector Name: Connor **Inspector Name:** Connor **Inspector Name:** Connor (see last page)

Permit#: 113610 **Address:** 3660 TANGLEWOOD TRL

No.	Description	Answer	Citations	Notes	1st Insp.	2nd Insp.	3rd Insp.
1	SITE AND SOIL CONDITIONS & SETBACK DISTANCES Site and Soil Conditions Consistent with Submitted Planning Materials	X	285.31(a) 285.30(b)(1)(A)(iv) 285.30(b)(1)(A)(v) 285.30(b)(1)(A)(iii) 285.30(b)(1)(A)(ii) 285.30(b)(1)(A)(i)		X		
2	SITE AND SOIL CONDITIONS & SETBACK DISTANCES Setback Distances Meet Minimum Standards	X	285.91(10) 285.30(b)(4) 285.31(d)		X		
3	SEWER PIPE Proper Type Pipe from Structure to Disposal System (Cast Iron, Ductile Iron, Sch. 40, SDR 26)	X	285.32(a)(1)		X		
4	SEWER PIPE Slope from the Sewer to the Tank at least 1/8 Inch Per Foot	X	285.32(a)(3)		X		
5	SEWER PIPE Two Way Sanitary - Type Cleanout Properly Installed (Add. C/O Every 100' &/or 90 degree bends)	X	285.32(a)(5)		X		
6	PRETREATMENT Installed (if required) TCEQ Approved List PRETREATMENT Septic Tank(s) Meet Minimum Requirements		285.32(b)(1)(G) 285.32(b)(1)(E)(iii) 285.32(b)(1)(E)(iv) 285.32(b)(1)(F) 285.32(b)(1)(B) 285.32(b)(1)(C)(i) 285.32(b)(1)(C)(ii) 285.32(b)(1)(D) 285.32(b)(1)(E) 285.32(b)(1)(A) 285.32(b)(1)(E)(ii)(II) 285.32(b)(1)(E)(i) 285.32(b)(1)(E)(ii)(I)	2000 gal. pretreatment 2 2500 EQ tanks			
7	PRETREATMENT Grease Interceptors if required for commercial		285.34(d)				

Inspector Notes: **10/13/23 JC Tanks are good. Remove rocks, boulders from tank walls. Cover tanks except for where rocks are impinging. Need revision for layout. Designer to address water line that was laid in same trench as septic line to field. Extra cabin/cabins on site, show on revision. Need water meter and chlorinator. Seal inlets/outlets that are leaking. 1/2/24 JC Tanks good. Explained problem using old**
Gave installer copy of 285 rule pertaining to this tank.

COMAL COUNTY

ENGINEER'S OFFICE

Permit of Authorization to Construct an On-Site Sewage Facility
Permit Valid For One Year From Date Issued

Permit Number: 113610

Issued This Date: 05/15/2023

This permit is hereby given to: Rebecca Creek Campgrounds

To start construction of a private, on-site sewage facility located at:

3660 TANGLEWOOD TRL
SPRING BRANCH, TX 78070

Subdivision: Charles Murhart Survey ABS No. 404
Unit: 0
Lot: 0
Block: 0
Acreage: 14.2300

APPROVED MINIMUM SIZES AS PER ATTACHED DESIGN

Type of System: Aerobic
Drip Irrigation

This permit gives permission for the construction of the above referenced on-site facility to commence. Installation must be completed by an installer holding a valid registration card from the Texas Commission on Environmental Quality (TCEQ). Installation and inspection must comply with current TCEQ and Comal County requirements.

Call (830) 608-2090 to schedule inspections.

****As a condition of this permit submittal a meter must be installed on the outflow line of the pump tank. The readings from this meter must be recorded on a daily basis and submitted to the Comal County Environmental Health Department once a month for 12 months from the date the License to Operate is issued. If at any time the daily me ermitted flow rate this permit will be void and a
new permit must be obtained.****

Instructions:

Place a check mark next to all items that apply. For items that do not apply, place "N/A". This OSSF Development Application Checklist **must** accompany the completed application.

OSSF Permit

- ✓ Completed Application for Permit for Authorization to Construct an On-Site Sewage Facility and License to Operate
- ✓ Site/Soil Evaluation Completed by a Certified Site Evaluator or a Professional Engineer
- ✓ Planning Materials of the OSSF as Required by the TCEQ Rules for OSSF Chapter 285. Planning Materials shall consist of a scaled design and all system specifications.
- ✓ Required Permit Fee
- ✓ Copy of Recorded Deed
- ✓ Surface Application/Aerobic Treatment System
  - ✓ Recorded Certification of OSSF Requiring Maintenance/Affidavit to the Public
  - ✓ Signed Maintenance Contract with Effective Date as Issuance of License to Operate

I affirm that I have provided all information required for my OSSF Development Application and that this application constitutes a completed OSSF Development Application.

AFFIDAVIT TO THE PUBLIC

THE COUNTY OF COMAL
STATE OF TEXAS

CERTIFICATION OF OSSF REQUIRING MAINTENANCE

According to Texas Commission on Environmental Quality Rules for On-Site Sewage Facilities (OSSF's), this document is filed in the Deed Records of Comal County, Texas.

I

The Texas Health and Safety Code, Chapter 366 authorizes the Texas Commission on Environmental Quality (commission) to regulate on-site sewage facilities (OSSFs). Additionally, the Texas Water Code (TWC), § 5.012 and § 5.013, gives the commission primary responsibility for implementing the laws of the State of Texas relating to water and adopting rules necessary to carry out its powers and duties under the TWC. The commission, under the authority of the TWC and the Texas Health and Safety code, requires owner's to provide notice to the public that certain types of OSSFs are located on specific pieces of property. To achieve this notice, the commission requires a recorded affidavit. Additionally, the owner must provide proof of the recording to the OSSF permitting authority. This recorded affidavit is not a representation or warranty by the commission of the suitability of this OSSF, nor does it constitute any guarantee by the commission that the appropriate OSSF was installed.

II

An OSSF requiring a maintenance contract, according to 30 Texas Administrative Code §285.91(12) will be installed on the property described as **(insert legal description)**: _____

T4.23 ac. Charles Murhart Survey abs. No. 404

The property is owned by **(insert owner's full name)**: Alan Carranza, Member, Rebecca Creek Campgrounds, LLC

This OSSF must be covered by a continuous maintenance contract for the first two years. After the initial two-year service policy, the owner of an aerobic treatment system for a single family residence shall either obtain a maintenance contract within 30 days or maintain the system personally.

Upon sale or transfer of the above-described property, the permit for the OSSF shall be transferred to the buyer or new owner. A copy of the planning materials for the OSSF can be obtained from the Comal County Engineer's Office.

Septic System Service Agreement

I. **General**: This work for Hire Agreement (hereinafter referred to as "agreement") is entered into and between ***Rebecca Creek Campgrounds*** (hereinafter referred to as "Customer") and JT Environmental Service. By this agreement , JT Environmental Service and it's employees (hereinafter inclusively referred to as "Contractor") agree to render services at the site address stated below, and described herein, and the Customer agrees to fulfill his/her/their responsibilities, as described herein. The designed flow rate for this system is a maximum of ***500*** gallons per day.

II. **Effective dates**: This Agreement commences on ***November 2021*** and ends on ***November 2023*** . If this is an initial agreement (New Installation), the Customer will notify the Contractor within two(2) business days of the systems first use to establish the date of commencement. If no notification is received by the Contractor within ninety (90) days after completion of the installation or where county authority mandates, the date of commencement will be the date the "License to Operate" (Notice of Approval) was issued by the permitting authority. This agreement may or may not commence at the same time as any warranty period of installed equipment, but in no case shall it extend the specified warranty.

III. **Renewal:** This agreement shall automatically renew each at the same terms, conditions ,and costs unless either party gives notice of termination a minimum of thirty (30) days prior to the end of the first agreement period. See section IV.

IV. **Termination of agreement:** This agreement may be terminated by either party with thirty (30) days written notice for any reason, including for example, substantial failure to perform in accordance with it's terms, without fault or liability of the terminating party. If this agreement is so terminated, Contractor will be paid at the rate of $75.00 per hour for any work performed and for which compensation has not been received. After the deduction of any remaining monies from Prepayment for services will be refunded to Customer within thirty(30) days. Either party terminating this agreement for any reason, including non-renewal, shall notify in writing the equipment manufacturer and the appropriate regulatory authority a minimum of thirty (30) days prior to the date of such termination. Non payment of any kind shall be considered breach of contract and a termination.

V. **Services:** Contractor Will:
a. Inspect and perform routine upkeep on the On-Site Sewage Facility (hereinafter referred to as OSSF) as recommended by the treatment systems manufacturer, and required by state and/or local regulation ,for a total of three(3) visits per year. (**Residential**)
b. Provide written record of each visit to the site by means of an inspection tag attached or contained in the control panel.
c. Repair of Replace, if Contractor has necessary materials on site, any component of the OSSF to be failing or inoperative during the course of a routine monitoring visit. If such services are not covered by warranty, and services cost are $100.00 or less. Customer hereby authorizes Contractor to perform the service and invoice Customer for said service. When service cost are greater than $100.00, or if the contractor does not have the necessary supplies on site, the customer will be notified of required services and associated costs. Customer must notify Contractor of arrangements to affect repair of

system within two(2) days of said notification.
d. Provide sample collection and laboratory testing of TSS and BOD on a yearly basis (commercial systems only, as aplicable)
e. Forward copies of this agreement and all reports to the regulatory agency and the Customer.
f. Visit the site in response to Customers request for unscheduled services within forty-eight (48) hours of the date of notification (weekends and holidays excluded) of said request. Unless otherwise covered by warranty, costs for such unscheduled responses will be billed to the customer.

VI. **Disinfection**: The Disinfection system will be maintained by the Customer. A cost estimate can be provided if the customer can not perform this function. Customer initial AC.

VII. **Electronic Monitoring is not included in this agreement.**

VIII. **Performance of agreement:** Commencement of performance under this agreement is contingent on the following conditions:

a. If this is a 1. Contractor receipt of fully executed original copy or facsimile of this agreement and all documentation requested by Contractor.
2. Contractors receipt of payment of the Wastewater-monitoring fee in accordance with the terms as described in section XIV of this agreement.
b. If the above conditions are not met, Contractor is not obligated to perform any portion of this agreement.

IX. **Customers Responsibilities:** The Customer is responsible for each and all of the following:

a. Provide all necessary yard and lawn maintenance and removal of obstacles, including but not limited to : Dogs and other animals, vehicles, trees, brush, trash, or debris as needed to allow the OSSF to function properly, and to allow Contractor safe and easy access to all parts of the OSSF.
b. Protect equipment from physical damage including but not limited to damaged caused by insects.
c. Maintain a current license to operate and abide by the conditions and limitations of that license and all requirements for an OSSF from the State and/or local regulatory agency, whichever are more stringent, as well as proprietary systems manufacturer recommendations.
d. Notify Contractor immediately of any and all alarms, and/or any and all problems with. including failure of the OSSF.
e. Provide upon request by Contractor, water usage records for evaluation by Contractor as to the performance of the OSSF.
f. Allow samples at both the inlet and outlet of the OSSF to be obtained by Contractor for the purpose of evaluation of the OSSF. If these samples are taken to a laboratory for testing, with the exception of the service provided under section V, subsection d, above. Customer agrees to pay contractor for sample collection and transportation, portal to portal, at a rate of $35.00 per hour, plus associated fees for laboratory testing.
g. Prevent the backwash or flushing of water treatment of conditioning equipment from entering the OSSF.
h. Prevent condensation from air conditioning, or refrigeration units, or ice maker drains, from hydraulically overloading the aerobic treatment units. Drain lines may discharge into the surface application pump tank if approved by the system designer.
i. Provide pumping and cleaning of tanks and treatment units, when as recommended by Contractor, at Customers expense.
j. Maintain site drainage to prevent adverse effects to the OSSF.
k. Pay promptly and fully, all Contractors fees, Bills, or invoices as described herein.

X **Access by Contractor**: Contractor is hereby granted and easement to the OSSF for the purpose of performing services described herein. Contractor may enter during Contractors normal work hours and /or any reasonable hour without prior notice to Customer to perform services and/or repairs described herein. Contractor shall have access to the OSSF electrical and physical components.

Tanks and treatment units shall be accessible by means of man ways, or risers and removable covers, for the purpose of evaluation as required by state and/or local rules or proprietary system manufacturer. If not an initial agreement (new installation) and the access is not in place or provided by Customer, the cost for the labor of excavation, and possible other labor and material costs will be required. These costs shall be billed to the Customer as an additional service at a rate of $75.00 per hour, plus materials at list price. Excavated soil shall be replaced as best as can at the time of service, and under no circumstances is the Contractor responsible for damages to sod, grass, roots, landscaping, or any un-marked underground items (telephone, television, electrical, cable, water, gas, etc) or for the uneven settling of soil.

XI. **Limit of Liability**: Contractor shall not be held liable for any incidental, consequential, special damages, economic loss due to expense, loss of profits or income, loss of use to Customer, whether in contract tort of any other theory. In no event shall Contractor be liable in an amount exceeding the total fee for services amount paid by Customer under this agreement.

XII . **Severability:** If any provision of the "Proposal and Contract" shall be held to be invalid or un-enforceable for any reason, the remaining provisions shall continue to be valid and enforceable. If a court finds that any provision of the "agreement" is invalid or un-enforceable, but that by limiting such provisions is would become valid and enforceable, then such provisions shall be deemed to be written, constructed and enforces as so limited.

XIII. Fee for services: The cost for this agreement is **$465.00** (Four hundred Sixty Five). This fee only involves the regularly scheduled required inspection service described herein section **V. Services.** The Fee does not include any equipment, material, labor necessary for non-warranty repairs, unscheduled inspections, or Customer requested visits to site.

Price Schedule for common (not covered) services:

Customer requested site visits (Call Outs) ***$100.00***

Site evaluation for existing OSSF (N/A if a service contract is initiated)

Samples necessary for Regulatory authority compliance, not required by the STATE

For all other services/repairs, the contractor will provide a cost estimate to the customer.

XIV. **Payment:** Full amount due upon signature (required of new customers). Payment of invoices for any other service or repair provided by Contractor are due upon receipt of invoice.

XV. **Application or transfer of payment:** The fees paid for this agreement may transfer to the subsequent property owner; however this agreement is not transferable. Customer will advise subsequent property owner of the state requirement that they sign a replacement agreement authorizing Contractor to perform the herein described services, and accepting the Customers responsibilities. This replacement agreement must be signed and received in the Contractors office within ten (10) days of the date of transfer of property ownership. Contractor will apply all funds received from Customer, first to any past due obligations arising form this agreement including fees or charges for service or repairs. Any remaining monies will be applied to the funding of the replacement agreement. The consumption of funds in this manner may result in a reduction in the termination date of effective coverage per this agreement. See section IV.

XVI. **Entire agreement:** This agreement contains the entire Agreement of the parties, and there are no other conditions in any other agreement, oral or written.

Subject: Notice of Septic placement Permission

Regarding the Rebecca Creek Campgrounds at
3660 Tanglewood Trail
Spring Branch, TX 78070

To Whom It May Concern at Comal County Engineers Office,

The Rebecca Creek Campgrounds has permission to place its septic lines across any of Cypress Cove Water Supply's (CCWSC) easements as necessary.

Sincerely,

Angelyn Price
Administrative Office Manager

SITE EVALUATION AND CALCULATIONS

RECEIVED
By Brandon Olvera at 9:00 am, Oct 18, 2023

Site Evaluation:

Soil Texture:	Clay loam
Soil Structure:	Blocky
Soil Depth:	18" minimum
Restrictive Horizon:	At 18" min. from surface
Groundwater:	None encountered
Topography:	More than 2% slope on drainfield area

Determination: Site was determined to have a Class III soil. Due to the park layout and rock horizon an aerobic treatment unit followed by drip irrigation shall be installed.

Calculations:

System # 3; the calculated flow based on water records is 1755 gpd. The system shall be over designed to match the TCEQ designated flow of 2524 gpd. Reference design 100-8497 for calculations and layout. Water saving devices are used throughout.

Q = 2524 gpd

ASBUILT:
Two Pro-Flo Model 1500S aerobic treatment unit is installed. A 2000 gallon pre-treatment tank and Two 2500 gallon equalization tanks are installed preceding the aerobic treatment unit. Following the aerobic treatment unit Two 1500 gallon pump tanks. The tank system is followed by a drip irrigation system. (Reference the System Layout) Chlorinator is required for water entering pump tank compartment. Liquid type chlorination shall be used.

Ra = **0.20 gal. / sq. ft. / day,** **(For a Class III soil)**

A = Q / Ra, **A** = (2524 gal. / day) / (0.20 gal. / sq. ft. / day) = **12,620 sq. ft.**

SITE EVALUATION AND CALCULATIONS

Calculations:

Emitter line shall be used which has emitters spaced at 2 foot intervals, and adjacent emitter lines shall also be spaced at 2 feet on center.

Required line length = A / 2 = (12,620 sq. ft. / 2 sq. ft. per foot) = **6310 feet**
6625' of drip line is installed as shown on the System Layout ASBUILT

A 1 1/2" SCH 40 PVC supply line shall be used from the ATU systems pump tank to the drainfield. A 1 1/2" SCH 40 PVC return line from the drainfield back to the pump tank shall be provided. The system shall be set up in accordance with ATU specifications. (Contact manufacturer for complete specifications and reference the System Layout and details)

NOTES FOR INSTALLER (if applicable):

Do not connect water softener back-wash to septic system.

The TCEQ allows washing machine water to be discharged into a separate gray water system unless the water contains human waste. Running this water out separate from the septic system can prolong the life of the system.

A Netafim 1 1/2" "Super Filter" 200 mesh/55 micron, shall be installed in a riser in the outlet line of the pump tank compartment.

Connect the 1 1/2" "Super Filter" and assemble in accordance with manufacturers specifications..

Contact ATU dealer for complete specifications. All required specifications may not be contained in this design.

SITE EVALUATION AND CALCULATIONS

The design pressure at the emitters is as specified by the manufacturer.

The total length of supply and return pipe is as shown on the System Layout

Diameter of supply and return lines is as shown on the System Layout.

NOTES TO OWNER OF SYSTEM:
MAINTENANCE AND MANAGEMENT PRACTICES (if applicable):

An OSSF should not be treated as if it were a normal city sewer system.

The excessive use of in-sink garbage grinders and grease discarding should be avoided.

Do not use the toilet to dispose of cleaning tissues, cigarette butts, or other trash.

Septic tanks shall be cleaned before sludge accumulates to a point where it approaches the bottom of the outlet device, to prevent solids from exiting the tank with the liquid.

Septic tanks should be cleaned every two-to-three years to prevent excessive sludge buildup.

Do not build driveways, storage buildings, or other structures over the treatment works or its disposal field.

Chemical additives or the so-called enzymes are not necessary for the operation of a septic tank. Some of these additives may be harmful to the tank's operation.

SITE EVALUATION AND CALCULATIONS

Soaps, detergents, bleaches, drain cleaners, and other household cleaning materials will very seldom affect the operation of the system. However, moderation should be exercised in the use of such materials.

It is not advisable to allow water softener back flush to enter into any portion of the OSSF.

Except for Aerobic systems, the liquid from the OSSF is still heavily laden with bacteria. Contact with this liquid should be avoided, if it surfaces.

WATER CONSERVATION MEASURES (if applicable):

Showers usually use less water than baths. Install a water saving shower head that uses less than 2 1/2 gallons per minute and saves both water and energy.

If you take a tub bath, reduce the level of water in the tub from the level to which you customarily fill it.

Leaky faucets and faulty toilet fill-up mechanisms should be repaired as quickly as possible.

Check toilets for leaks that may not be apparent. Add a few drops of food coloring to the tank. Do not flush. If the color appears in the bowl within a few minutes, the toilet fill or ball-cock valve needs to be adjusted to prevent water from overflowing the stand pipe, or the flapper at the bottom of the toilet tank needs to be replaced.

Reduce the amount of water used for flushing the toilet by installing one of the following: a new toilet (1.6 gallon); a toilet tank dam; or filling and capping one-quart plastic bottles with water (usually one is all that will fit in smaller toilet tanks) and lowering them into the tank of the existing 3.5 gallon or larger toilet. Do not use bricks since they may crumble and cause damage to the fixture.

SITE EVALUATION AND CALCULATIONS

Try to run the dishwasher with a full load, whenever possible.

Avoid running the water continuously for brushing teeth, washing hands, rinsing kitchen utensils, or for cleaning vegetables.

Use faucet aerators that restrict flow to no more than 2.2 gallons per minute to reduce water consumption.

Keep a container of drinking water in the refrigerator instead of running the faucet until the water turns cool.

Insulate all hot water pipes to avoid long delays of wasted water while waiting for the heated water.

Ask your city, county, or local government about their programs to conserve water, and how they can help you save water.

Subject: Septic permit 113609 (System #2) and permit 113610 (System #3)
3660 Tanglewood Trail, Comal County, Texas.

Dear Sirs:

Based on information provided by the owners of Rebecca Creek Campgrounds, the tight line between the tank inlet and the buildings was installed by a master plumber, Corey Martinez and Rene Reyes License number 56117.

TCEQ requires a licensed installer shall connect the tight line to the tanks. Marco Fernandez is taking responsibility for a minimum of 5 feet of the tight line from the inlet of the tank back to the buildings. This shall be inspected by the appropriate county officials to verify it matches TAC 285 rules.

Sincerely,

Kaeleigh Crandall

Kaeleigh R. Crandall, P.E.

Description	Amount	Tax
Ran the plumbing for system 2 and system 3	1800.0	Add a Tax

As a condition of this permit submittal, a meter must be installed on the outflow line of the pump tank. The readings from this meter must be recorded on a daily basis and submitted to the Comal County Environmental Health Department once a month for 12 months from the date the License to Operate is issued. If at any time the daily meter reading exceeds the permitted flow rate this permit will be void and a new permit must be obtained.

THE INSTALLATION OF THE 4 PROPOSED SEPTIC SYSTEMS WILL DISTURB LESS THAN 5 ACRES. THEREFORE PER 30 TAC 213.21, A CONTRIBUTING ZONE PLAN IS NOT REQUIRED FOR THIS ACTIVITY.

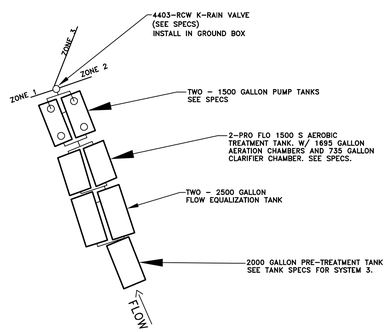
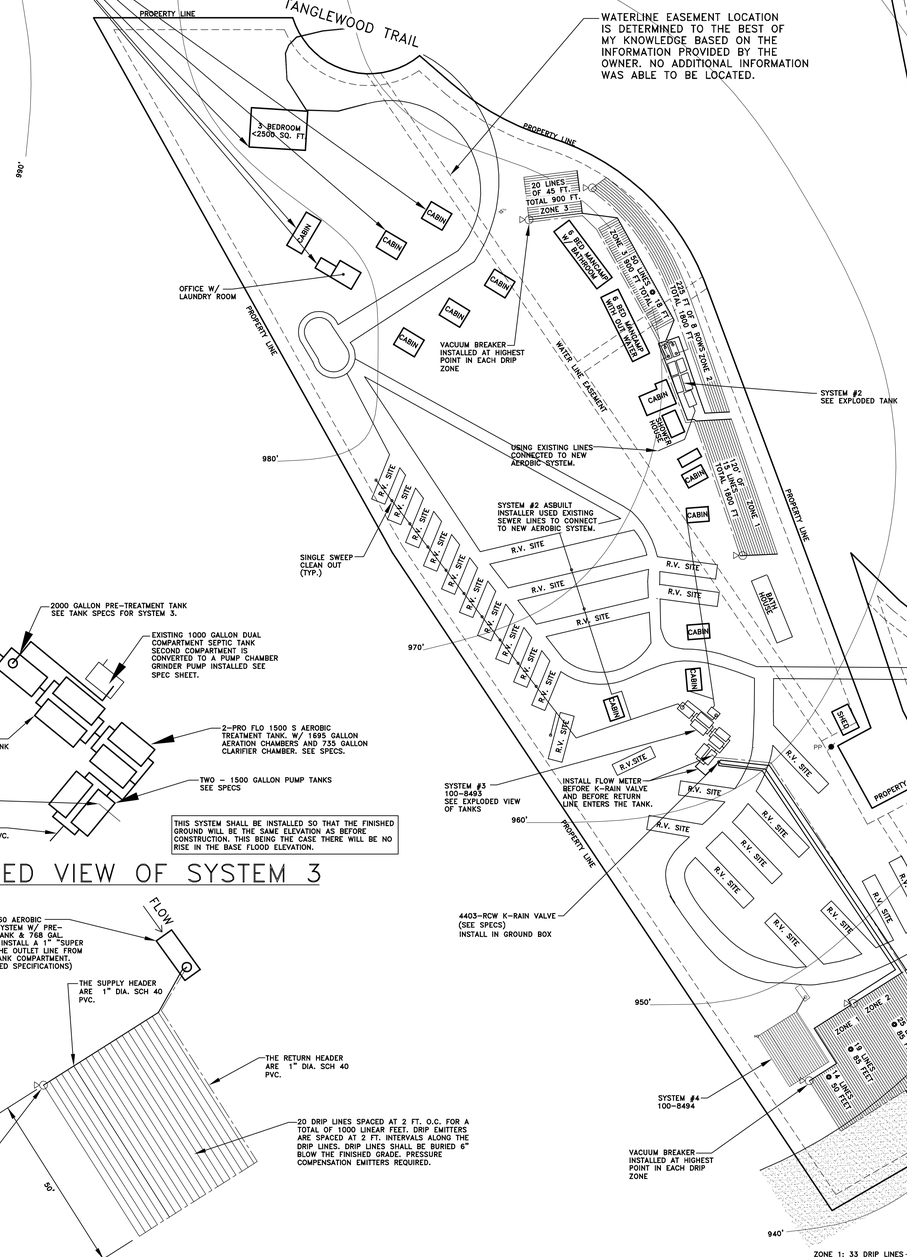
SOIL EVALUATION POINTS ×

THIS EXISTING SYSTEM #1 IS GRAND FATHERED IN, AS OF 9-28-21 REFERENCE EMAIL FROM ROBERT BOYD, P.E., COMAL COUNTY ASSISTANT ENGINEER.



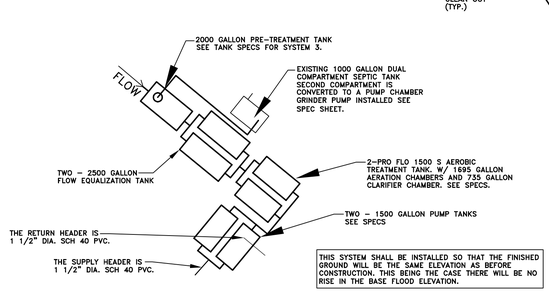
EXPLODED VIEW OF SYSTEM 2



SCALE: 1" = 60'

SYSTEM LAYOUT

60 0 60 120



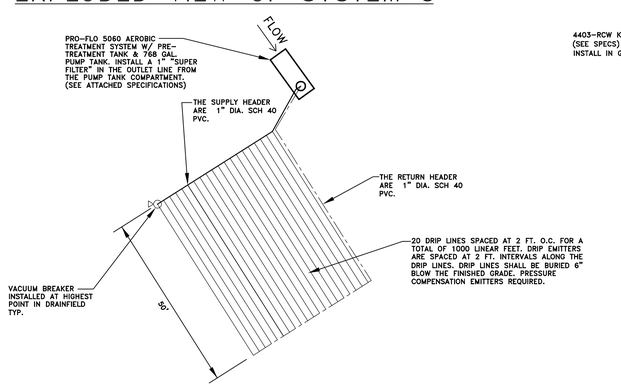
EXPLODED VIEW OF SYSTEM 3

THIS SYSTEM SHALL BE INSTALLED SO THAT THE FINISHED GROUND WILL BE THE SAME ELEVATION AS BEFORE CONSTRUCTION. THIS BEING THE CASE THERE WILL BE NO RISE IN THE BASE FLOOD ELEVATION.

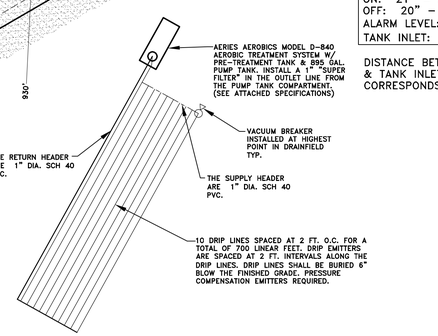
FLOAT SETTINGS & DISTANCES ABOVE THE INSIDE BOTTOM OF THE PUMP COMPT. ARE AS FOLLOWS:

ON: 18" - 260 GAL.
OFF: 17" - 246 GAL.
ALARM LEVEL: 43" - 693 GAL.
TANK INLET: 53" - 768 GAL.

DISTANCE BETWEEN ALARM LEVEL & TANK INLET IS 10" WHICH CORRESPONDS TO 145 GAL.



EXPLODED VIEW OF SYSTEM 4



EXPLODED VIEW OF SYSTEM 5

FLOAT SETTINGS & DISTANCES ABOVE THE INSIDE BOTTOM OF THE PUMP COMPT. ARE AS FOLLOWS:

ON: 21" - 304 GAL.
OFF: 20" - 290 GAL.
ALARM LEVEL: 43" - 623 GAL.
TANK INLET: 53" - 768 GAL.

DISTANCE BETWEEN ALARM LEVEL & TANK INLET IS 10" WHICH CORRESPONDS TO 145 GAL.

PER COUNTY REQUIREMENTS, A FLOW METER SHALL BE INSTALLED ON THE SUPPLY LINE AND RETURN LINE OF EACH AEROBIC UNIT FOLLOWED BY A DRIP IRRIGATION SYSTEM. FOR THE AEROBIC UNIT WITH SPRAY ONLY ONE METER SHALL BE INSTALLED ON THE SUPPLY LINE TO THE SPRINKLER. THE FLOW TO EACH SEPTIC SYSTEM SHALL BE METERED. EACH SYSTEM SHALL BE MONITORED, RECORDED & SUBMITTED TO COMAL COUNTY FOR ONE YEAR TO VERIFY NO MORE THAN THE PERMITTED FLOW IS USED FOR EACH SYSTEM.

SITE NOTES:

ALL EXISTING UNDERGROUND UTILITIES SHALL BE LOCATED AMD MARKED BEFORE ANY EXCAVATION BEGINS.

EXISTING WATER LINE LOCATIONS ARE UNDETERMINED. SEE WATER CASING NOTE AS REQUIRED.

WHERE A WATER LINE IS CLOSER THAN 10' TO A WASTEWATER MAIN, THE WATER LINE SHALL BE CASED INSIDE OF A SCH 40 PVC PIPE SUCH THAT THE ENDS OF THE CASING ARE AT LEAST. 10' AWAY FROM THE WASTEWATER MAIN. IN ADDITION, IF THE LINES CROSS, THE WATER LINE SHALL BE AT LEAST 6" ABOVE THE WASTEWATER MAIN.

WHERE DRAIN LINES PASS UNDER ROADWAYS, THEY SHALL BE SCH 80 PVC OR THEY SHALL BE SLEEVED INSIDE OF A SCH 40 PVC PIPE WHICH IS AT LEAST TWO NOMINAL PIPE SIZES LARGER THAN THE DRAIN LINE.

ALL ABANDONED SEPTIC TANKS SHALL BE LOCATED, PUMPED, BACKFILLED & CAVED-IN.

USE EXISTING SEWER LINES UNDER R.V. SITES WHERE POSSIBLE.

A TWO-WAY CLEAN OUT SHALL BE INSTALLED BETWEEN THE BUILDING AND AEROBIC TANKS.

WHEN CROSSING EASEMENT LINES, PERMISSION SHALL BE GRANTED BY THE EASEMENT HOLDER BEFORE ANY EXCAVATION BEGINS.

STANDARD NOTES:

1. SEPTIC TANK MUST BE A MINIMUM OF 50' FROM ANY WATER WELL. CLOSEST DISTANCE FROM ANY PART OF THE DRAINFIELD AREA TO A WATER WELL MUST BE 100' MINIMUM.
2. MINIMUM SETBACK OF SPRAY AREA FROM PROPERTY LINE IS 20'.
3. MINIMUM SETBACK OF DRIP AREA FROM PROPERTY LINE IS 5'.
4. MINIMUM SEPARATION DISTANCE BETWEEN SEPTIC TANK OR DRAINFIELD AREA AND WATER SUPPLY LINES IS 10'.
5. SETBACK OF SPRAY OR DRIP AREA FROM LAKES, STREAMS, PONDS, AND RIVERS IS 50' MINIMUM.
6. SLOPE OF INFLOW LINE TO TANK IS $\frac{1}{8}$ INCH PER FOOT RUN. PIPE IS 4" SCH 40 PVC.
7. WHERE PARALLEL SEWER AND NEW WATER LINES ARE CLOSER THAN 9' THE REQUIREMENTS SPECIFIED IN TCEQ, SUBCHAPTER D, 290.44(e)(4)(A) SHALL BE STRICTLY FOLLOWED.
8. WHERE SEWER AND NEW WATER LINES CROSS, THE REQUIREMENTS SPECIFIED IN TCEQ, SUBCHAPTER D, 290.44(e)(4)(B) SHALL BE STRICTLY FOLLOWED.
9. SYSTEM SHALL BE INSPECTED BY THE COUNTY INSPECTOR IN ACCORDANCE WITH CURRENT COUNTY INSPECTION PROCEDURES.

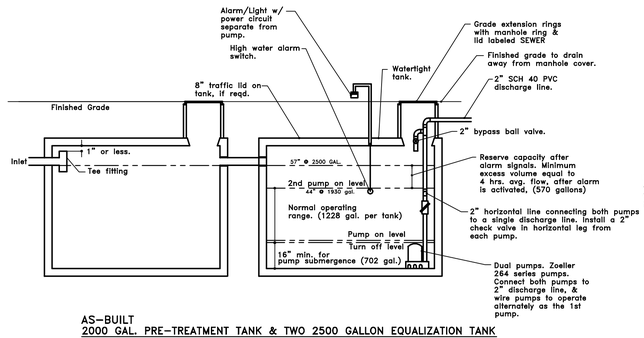
SYSTEM #3 TANK SPECS:

AS-BUILT



AS-BUILT
2000 GAL. PRE-TREATMENT TANK & TWO 2500 GALLON EQUALIZATION TANK

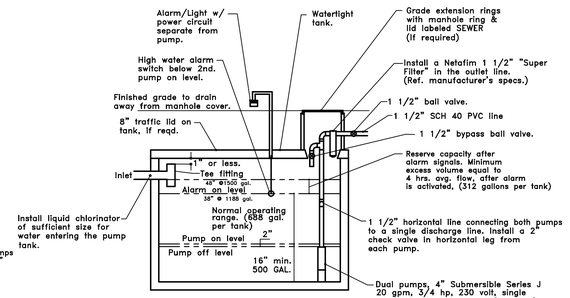
SET VALVES, FLOATS, AND TIMERS TO DELIVER A MAXIMUM OF 16 GAL./MIN., AND 61 GALLONS PER HOUR TO THE AEROBIC TREATMENT UNITS, TOTAL.

NOTES:

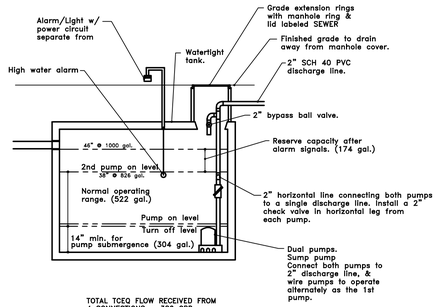
THE ALARM ON LEVEL SHALL BE BELOW THE 2ND PUMP ON LEVEL. THE ALARM SYSTEM SHALL HAVE A LOCK-ON FEATURE SO THAT ONCE IT IS ACTIVATED, IT WILL NOT GO OFF WHEN THE 2ND PUMP DRAWS THE LIQUID LEVEL BELOW THE ALARM ON LEVEL. BOTH AUDIO AND VISUAL ALARMS SHALL HAVE A MANUAL SILENCE SWITCH.

ALL ELECTRICAL WIRING SHALL BE IN ACCORDANCE WITH THE MOST RECENT EDITION OF THE NATIONAL ELECTRIC CODE. CONNECTIONS SHALL BE IN APPROVED JUNCTION BOXES AND ALL EXTERNAL POWER WIRING SHALL BE IN APPROVED ELECTRICAL CONDUIT, BURIED, AND TERMINATED AT A MAIN CIRCUIT BREAKER PANEL OR SUB-PANEL. ALL ELECTRICAL COMPONENTS SHOULD HAVE AN ELECTRICAL DISCONNECT WITHIN DIRECT VISION. ELECTRICAL DISCONNECTS MUST BE WEATHERPROOF (APPROVED FOR OUTDOOR USE) AND HAVE MAINTENANCE LOCKOUT PROVISIONS.

USE A LARGER TANK IF REQUIRED TO MEET MINIMUM STORAGE REQUIREMENTS.



TWO 1500 GAL. PUMP TANK DETAIL
AS-BUILT

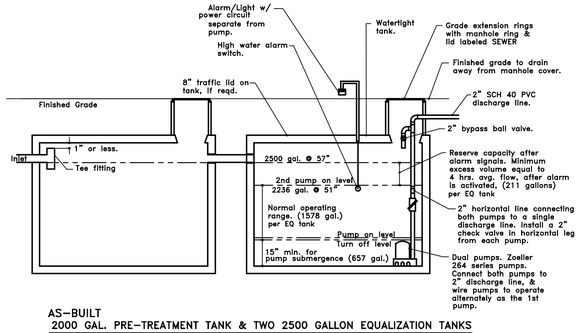


TOTAL TCEQ FLOW RECEIVED FROM 4 CONNECTIONS = 380 GPD

1000 GALLON LIFT STATION (AS-BUILT)

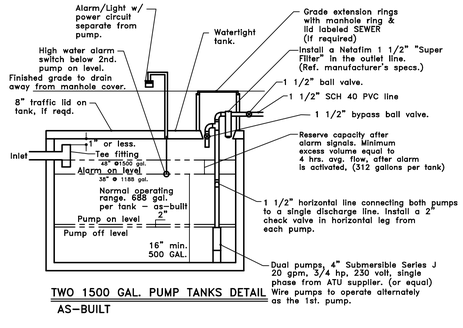
SYSTEM #2 TANK SPECS:

AS-BUILT



AS-BUILT
2000 GAL. PRE-TREATMENT TANK & TWO 2500 GALLON EQUALIZATION TANKS

SET VALVES, FLOATS, AND TIMERS TO DELIVER A MAXIMUM OF 16 GAL./MIN., AND 74 GALLONS PER HOUR TO THE AEROBIC TREATMENT UNITS, TOTAL.



TWO 1500 GAL. PUMP TANKS DETAIL
AS-BUILT

NOTES:

THE ALARM ON LEVEL SHALL BE BELOW THE 2ND PUMP ON LEVEL. THE ALARM SYSTEM SHALL HAVE A LOCK-ON FEATURE SO THAT ONCE IT IS ACTIVATED, IT WILL NOT GO OFF WHEN THE 2ND PUMP DRAWS THE LIQUID LEVEL BELOW THE ALARM ON LEVEL. BOTH AUDIO AND VISUAL ALARMS SHALL HAVE A MANUAL SILENCE SWITCH.

ALL ELECTRICAL WIRING SHALL BE IN ACCORDANCE WITH THE MOST RECENT EDITION OF THE NATIONAL ELECTRIC CODE. CONNECTIONS SHALL BE IN APPROVED JUNCTION BOXES AND ALL EXTERNAL POWER WIRING SHALL BE IN APPROVED ELECTRICAL CONDUIT, BURIED, AND TERMINATED AT A MAIN CIRCUIT BREAKER PANEL OR SUB-PANEL. ALL ELECTRICAL COMPONENTS SHOULD HAVE AN ELECTRICAL DISCONNECT WITHIN DIRECT VISION. ELECTRICAL DISCONNECTS MUST BE WEATHERPROOF (APPROVED FOR OUTDOOR USE) AND HAVE MAINTENANCE LOCKOUT PROVISIONS.

USE A LARGER TANK IF REQUIRED TO MEET MINIMUM STORAGE REQUIREMENTS.

CALCULATIONS TO DETERMINE PERMITTED FLOW FOR COMAL COUNTY:

THE PERMITTED FLOW FOR EACH SYSTEM IS BASED ON WATER RECORDS PROVIDED BY THE OWNER OVER AN ENTIRE YEAR. THE TCEQ DAILY FLOW FOR THE PARK SHALL BE USED TO SIZE EACH SYSTEM. A DIRECT RATIO WILL BE USED TO DETERMINE HOW THAT WATER IS DISTRIBUTED THROUGHOUT THE PARK FOR THE PERMIT APPLICATIONS. SEE CALCULATIONS BELOW.

MAXIMUM DAILY DEMAND FROM FEBRUARY LODGE WATER (100510 GALLONS) AND APRIL CABINS WATER RECORDS (30480 GALLONS)

100510 GALLONS / 28 DAYS OF FEBRUARY = 3590 GPD
30480 GALLONS / 30 DAYS OF APRIL = 1016 GPD
$Q_{TOTAL-PARK-WATER-USAGE}$ = 4606 GPD

DIRECT RATIO EQUATION:

$$\frac{Q_{TCEQ-COMPONENT}}{Q_{TCEQ-TOTAL-PARK}} = \frac{Q_{COMPONENT}}{Q_{TOTAL-PARK-WATER-RECORDS}}$$

FOR SYSTEM 1 $Q_{TCEQ\ COMPONENT}$:

3 BEDROOM <2500 SQ. FT. Q = 240 GPD
OFFICE W/5 EMPLOYEES Q= 5 EMPLOYEES(4 GPD/ PERSON)=20 GPD
LAUNDRY ROOM W/ 4 WASHING MACHINES
Q= 4 WASHING MACHINES (200 GPD / MACHINE) = 800 GPD
3 CABINS (AS AN APARTMENT)
Q= 100 GPD/ CABIN (3 CABINS) = 300 GPD

$Q_{TCEQ\ COMPONENT}$ = 1360 GPD SYSTEM #1

FOR SYSTEM 2 $Q_{TCEQ\ COMPONENT}$:

4 CABINS (AS AN APARTMENT)
Q= 100 GPD/ CABIN (4 CABINS) = 400 GPD
6 BED MANCAMP WITH 1 COMMON BATHROOM (SIZED AS HOTEL ROOM)
Q = 60 GPD / BED (6 BEDS) = 360 GPD
SHOWER HOUSE Q = 1344 GPD (TOTAL BATH USAGE EQUALLY DIVIDED AMONGST BOTH SHOWER HOUSES. SEE CALCULATIONS FOR EXPLANATION)

$Q_{TCEQ\ COMPONENT}$ = 2104 GPD SYSTEM #2

FOR SYSTEM 3 $Q_{TCEQ\ COMPONENT}$:

Q = 17 RV (40 GPD / RV) = 680 GPD
5 CABINS (AS AN APARTMENT)
Q= 100 GPD/ CABIN (5 CABINS) = 500 GPD
BATH HOUSE Q = 1344 GPD (TOTAL BATH USAGE EQUALLY DIVIDED AMONGST BOTH SHOWER HOUSES. SEE CALCULATIONS FOR EXPLANATION)

$Q_{TCEQ\ COMPONENT}$ = 2524 GPD SYSTEM #3

FOR SYSTEM 4 $Q_{TCEQ\ COMPONENT}$:

9 RV SITES (40 GPD) = 360 GPD

$Q_{TCEQ\ COMPONENT}$ = 360 GPD SYSTEM #4

FOR SYSTEM 5 $Q_{TCEQ\ COMPONENT}$:

7 RV SITES (40 GPD) = 280 GPD

$Q_{TCEQ\ COMPONENT}$ = 280 GPD SYSTEM #5

FLOW FOR BATH HOUSE & SHOWER HOUSE:

USAGE FROM RV Q= 28 GPD/ RV (33 TOTAL RV) = 924 GPD
USAGE FROM CAMPSITES
Q = 25 CAMPSITES (2 PEOPLE/ SITE) (28 GPD / SHOWER) = 1400 GPD
USAGE FROM MANCAMPS
Q = 13 BEDS (28 GPD) = 364 GPD

Q TOTAL = 2688 GPD FOR BOTH BATHHOUSE & SHOWER HOUSE
FOR CONSERVATISM THIS IS MORE THAN THE RECOMMENDED TCEQ FLOW

TOTAL FLOW FOR ENITRE PARK PER TCEQ:

$Q_{TCEQ-TOTAL-COMPONENT}$=1360 GPD + 2104 GPD + 2524 GPD + 360 GPD + 280 GPD= 6628 GPD

DIRECT RATIO FOR SYSTEM 1 $Q_{COMPONENT}$:

$$\frac{1360\ GPD\ TCEQ\ COMPONENT}{6628\ TCEQ\ TOTAL} = \frac{Q\ COMPONENT}{4606\ TOTAL\ PARK\ WATER\ RECORDS}$$

Q PERMITTED COMPONENT = 946 GPD FOR SYSTEM #1

DIRECT RATIO FOR SYSTEM 2 $Q_{COMPONENT}$:

$$\frac{2104\ GPD\ TCEQ\ COMPONENT}{6628\ TCEQ\ TOTAL} = \frac{Q\ COMPONENT}{4606\ TOTAL\ PARK\ WATER\ RECORDS}$$

Q PERMITTED COMPONENT = 1463 GPD FOR SYSTEM #2

DIRECT RATIO FOR SYSTEM 3 $Q_{COMPONENT}$:

$$\frac{2524\ GPD\ TCEQ\ COMPONENT}{6628\ TCEQ\ TOTAL} = \frac{Q\ COMPONENT}{4606\ TOTAL\ PARK\ WATER\ RECORDS}$$

Q PERMITTED COMPONENT = 1755 GPD FOR SYSTEM #3

DIRECT RATIO FOR SYSTEM 4 $Q_{COMPONENT}$:

$$\frac{360\ GPD\ TCEQ\ COMPONENT}{6628\ TCEQ\ TOTAL} = \frac{Q\ COMPONENT}{4606\ TOTAL\ PARK\ WATER\ RECORDS}$$

Q PERMITTED COMPONENT = 251 GPD FOR SYSTEM #4

DIRECT RATIO FOR SYSTEM 5 $Q_{COMPONENT}$:

$$\frac{280\ GPD\ TCEQ\ COMPONENT}{6628\ TCEQ\ TOTAL} = \frac{Q\ COMPONENT}{4606\ TOTAL\ PARK\ WATER\ RECORDS}$$

Q PERMITTED COMPONENT = 195 GPD FOR SYSTEM #5

COMPARE THESE FEATURES

- Non-Clogging Vortex Impeller Design.
- Float operated, submersible (NEMA 6) 2 pole switch.
- Durable cast iron construction. Cast iron switch cap, motor, and pump housing.
- Stainless steel screws, bolts, handle, guard, arm and seal assembly.
- Engineered, glass-filled, plastic impeller with metal insert.
- UL-listed 3-wire cord and plug. 15 ft. cord standard for automatic & nonautomatic.
- Corrosion resistant powder coated epoxy finish.
- Thermal overload protection.
- Oil filled PSC motor - hermetically sealed.
- Engineered plastic base.
- .4 H.P. 115V & 230V, 1Ph., 60 cycle, 1725 RPM.
- Carbon and ceramic shaft seal.
- Oil Lubricated Bearings.
- Passes 2-inch spherical solids.
- 2" NPT Discharge.
- On point - 12½"
- Off point - 4½"

CONSULT FACTORY FOR SPECIAL APPLICATIONS

- Electrical alternators for duplex systems available with variable level float switches.
- Minimum recommended basin size
  Simplex-18"x30"
  Duplex-30"x30"
- Standard Automatic - Weight 39 lbs. .4 H.P.
- High water alarms available.
- Mechanical alternators available for duplex systems.

⚠ CAUTION Maximum temperature of sewage or dewatering must be limited to 130° F. (54° C.)
For over 130° F. (54° C.) special quotation required.

264 MODELS				CONTROL SELECTION		
Model	Volts	Ph	Mode	Amps	Simplex	Duplex
M264	115	1	Auto	9.4	1 or 1 & 7	———
N264	115	1	Non	9.4	2 or 2 & 6	3 or 4 & 5
D264	230	1	Auto	4.7	1 or 1 & 7	———
E264	230	1	Non	4.7	2 or 2 & 6	3 or 4 & 5

SELECTION GUIDE

1. Integral float operated 2-pole mechanical switch, no external control required.
2. Single piggyback variable level float switch, or double piggyback variable level float switch. Refer to FM0477.
3. Mechanical alternator M-Pak 10-0072 or 10-0075.
4. See FM0712 for correct model of electrical alternator.
5. Control switch 10-0225 used as a control activator specify duplex (3) or (4) float system.

For information on additional Zoeller products refer to catalog on Piggyback Variable Level Float Switches, FM0477; Electrical Alternator, FM0486; Mechanical Alternator, FM0495; Sump/Sewage Basins, FM0487, and Simplex Pump Control, FM1596; Alarm System, FM0712.

⚠ CAUTION
All installation of controls, protection devices and wiring should be done by a qualified licensed electrician. All electrical and safety codes should be followed including the most recent National Electric Code (NEC) and the Occupational Safety and Health Act (OSHA).

RESERVE POWERED DESIGN

For unusual conditions a reserve safety factor is engineered into the design of every Zoeller pump.

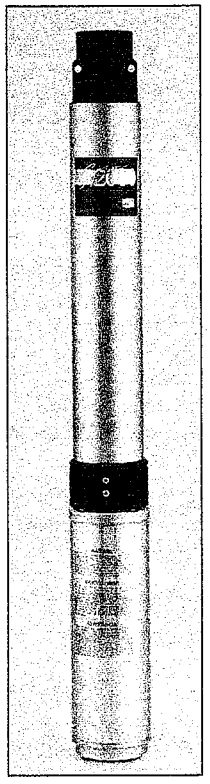
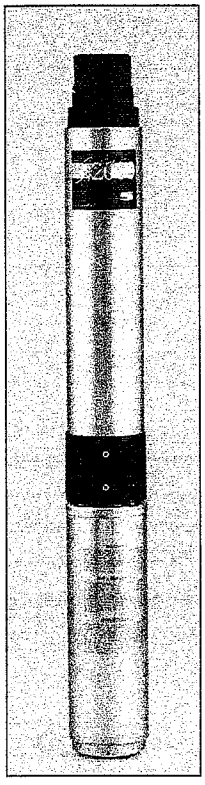
Signature 2000®



5-7 GPM TrimLine™
Max O.D. = 3-3/4"



10-30 GPM Series
Max O.D. = 3-7/8"

Series J
Composite and Stainless

Precision-engineered, corrosion-resistant Signature 2000® Series J pumps in 5, 7, 10, 15, 20 and 30 GPM models deliver efficient, dependable performance even in rough, aggressive water. Heads to over 700 feet and capacities to 45 GPM. Built to deliver long-term, trouble-free service.

These pumps feature the patented Signa-Seal™ staging system. Floating stack design resists sand and reduces sand locking.

The 5 & 7 GPM models are the smaller diameter, TrimLine™ design; 10, 15, 20, and 30 GPM are standard models.

UL Classified to ANSI/NSF Standard 61, Drinking Water System Components – Health Effects.

MATERIALS

Shell – stainless steel

Discharge – fiberglass-reinforced thermoplastic

Discharge bearing – Nylatron®

Intermediate bearing – (on larger units) polycarbonate, nitrile rubber, and stainless steel

Impellers – Acetal

Diffusers – Polycarbonate

Suction caps – Polycarbonate with stainless steel insert

Thrust pads – proprietary spec.

Shaft and coupling – stainless steel

Intake – fiberglass-reinforced thermoplastic

Intake screen – polypropylene

Check valve – durable internal check valve

Cable guard – stainless steel

Agency Listings – UL 778, CSA and NSF

EFFLUENT PUMPS

Little GIANT®

REVISED
11:17 am, Apr 07, 2022

C1 SERIES - 1/2 HP

APPLICATIONS

Gray water pumping, filtered effluent service water pumping,
water reclamation projects such as pumping from rain catchment basins,
aeration and other fountain or pond applications, agriculture and livestock water pumping

FEATURES

- Supplied with a removable 5" base for secure and reliable mounting
- Bottom suction design
- Robust thermoplastic discharge head design resists breakage during installation and operation
- Single shell housing design provides a compact unit while ensuring cool and quiet operation
- Hydraulic components molded from high quality engineered thermoplastics
- Optimized hydraulic design allows for increased performance and decreased power usage
- All metal components are made of high grade stainless steel for corrosion resistance
- Available with a high quality 115 V or 230 V, 1/2 hp motor
- Fluid flows of 10, 20, and 30 gpm, with a maximum shut-off pressure of 100 psi
- Heavy-duty 600 V 10 foot SJOOW jacketed lead

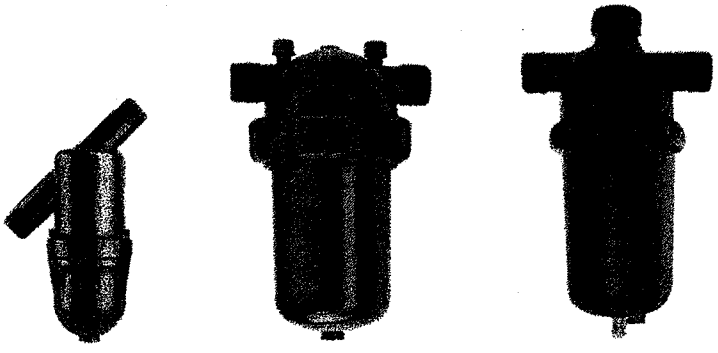
NETAFIM™
GROW MORE WITH LESS

MANUAL DISC FILTERS

RELIABLE, EFFICIENT PLASTIC DISCS CREATE SUPERIOR FILTRATION



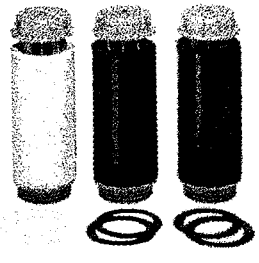
3/4" 1" 2" DUAL LITE

PRODUCT ADVANTAGES

- Highly effective multiple disc ring design captures and holds more debris.
- Greater holding capacity of the rings vs. screen filters mean less frequent cleaning.
- Rings are easily removed for fast cleaning without the need for scrubbing.
- Color-coded disc rings make identification of mesh rating fast and easy.

APPLICATIONS

- Primary irrigation filter for relatively clean or average water quality
- Protection of irrigation systems from clogging and/or abrasion



MESH/MICRON		
MESH	MICRON	DISC COLOR
040	400	Blue
080	200	Yellow
120	130	Red
140	115	Black
200	55	Green

Substitute *** in Model Number for proper mesh.

THE FILTERING PROCESS

Grooved, compressed plastic disc rings produce a deep filtration process. As dirty water is pumped into the filter and pressure increases on the outside of the filter, the water pressure compresses the rings together tightly.

Grooves in the disc rings crisscross, forming a three dimensional network that traps particles. The number of crisscrossed intersection points on each groove varies, depending on filtration grade. The turbulence in the varying paths and the large number of intersections create an environment where particles are eventually trapped.

This design filters the dirty water thoroughly, not only on the outer surface of the cylindrical disc filter, but through the entire depth of every ring's grooves. The result is a larger, more efficient filtering area (when compared to screen filters) with more debris being captured and cleaner water exiting from the filter.

K-RAIN 4000
DISTRIBUTING VALVES
THE NEXT GENERATION OF *PROFESSIONAL* PRODUCTS.

FEATURES/BENEFITS

- **2 Year Trade Warranty-** Factory support up to two years after purchase.
- **ABS Polymer Construction-** High-strength, non-corrosive body for long product life.
- **Available in 4 and 6 Outlet Models-** Can quickly and easily change from two to six watering zones.
- **Simplicity of Design-** Valves are easily maintained and serviced for long product life.
- **Operates at Low 10 GPM at Pressures of 25-75 PSI-** Reliably automates multiple zoned residential and small commercial irrigation or wastewater systems.

K RAIN®

IRRIGATION SOLUTIONS WORLDWIDE™

K-RAIN MODEL 4000: DISTRIBUTING VALVE

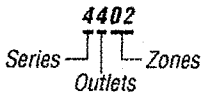
The 4000 distributing valve offers a reliable, economical way to automate multiple zoned residential and small commercial irrigation systems. The simplicity of design and a minimum of moving parts ensures ease of maintenance and long service life.

These patented valves allow for the number of watering zones to be changed quickly and easily. They are ideally suited for both city water and pump applications and may also be used for onsite wastewater or effluent water applications.

The 4000 valve is available in 4 or 6 outlet models. A quick change of the cam allows the valve to operate from 2 to 6 zones. The valve will operate with flows as low as 10 GPM and at pressures of 25 to 75 PSI.

The distributing valve shall carry a two-year trade warranty against manufacturing defects.

HOW TO SPECIFY



MODELS

4 Outlet - 1 1/4" x 1 1/4" Models

4400	No Cam
4402	Cammed for 2 Zone Operation
4403	Cammed for 3 Zone Operation
4404	Cammed for 4 Zone Operation

Other Options: Add to Part Number

RCW	Reclaimed Water Use

4 Outlet - 1" x 1" Models

4410	No Cam
4412	Cammed for 2 Zone Operation
4413	Cammed for 3 Zone Operation
4414	Cammed for 4 Zone Operation

6 Outlet - 1 1/4" x 1" Models

4600	No Cam
4602	Cammed for 2 Zone Operation
4603	Cammed for 3 Zone Operation
4604	Cammed for 4 Zone Operation
4605	Cammed for 5 Zone Operation
4606	Cammed for 6 Zone Operation

Other Options: Add to Part Number

RCW	Reclaimed Water Use

6 Outlet - 1" x 1" Models

4610	No Cam
4612	Cammed for 2 Zone Operation
4613	Cammed for 3 Zone Operation
4614	Cammed for 4 Zone Operation
4615	Cammed for 5 Zone Operation
4616	Cammed for 6 Zone Operation

SPECIFICATIONS

- Constructed of High Strength, Non-Corrosive ABS Polymer
- Flow Range:
  4 Outlet Valve: 10-40 GPM
  6 Outlet Valve: 10-25 GPM
- Pressure Rating: 25 - 75 PSI
- Pressure Loss:

4 Outlet Valve

Flow (GPM)	10	20	30	40
PSI Loss	2.0	3.0	4.5	6.4

6 Outlet Valve

Flow (GPM)	10	20	30
PSI Loss	2.5	4.5	7.5

- Inlet: Slip and Glue Connection
  4400 Series: to 1 1/4" PVC Pipe
  4410 Series: to 1" PVC Pipe
  4600 Series: to 1 1/4" PVC Pipe
  4610 Series: to 1" PVC Pipe
- Outlets: Slip and Glue Connections
  4400 Series: to 1 1/4" PVC Pipe
  4410 Series: to 1" PVC Pipe
  4600 Series: to 1" PVC Pipe
  4610 Series: to 1" PVC Pipe
- Dimensions: Height: 5-3/4"
  Width: 5-3/4"

INSTALLATION TIPS

- We Recommend the Installation of an Atmospheric Vacuum Breaker Between the Pump and the Valve.

RE: 14.23 acres out of the Charles Murhardt Survey, Abstract 404/ 3660 Tanglewood Trail.

Property Owner & Agent,

We received planning materials for the referenced permit application on 11/16/21 and found those planning materials to be deficient. In order to continue processing this permit, we need the following:

1. The site map is not legible. Please provide a digital copy of the site map so we can verify accordingly. (see attached)
2. Revise accordingly and resubmit.

If you have any questions, you can email me or call the office.

Thank you,

COMAL COUNTY TEXAS

Boyd, Robert

From: Donna Cosper <donna.cosper@tceq.texas.gov>
Sent: Wednesday, February 23, 2022 1:28 PM
To: Boyd, Robert
Subject: RE: Wastewater Flow vs. Treatment

Hi Robert,

Yes, your summary is correct. They must not go over the permitted daily flow. As we discussed, the generated flow might be more as long as the flow is equalized so that 5000 gpd or less is treated.

On the STR issue, I have not gotten legal's opinion. I know you no longer need their opinion for the case that generated the request but I want to get their take on it and will let you know as soon as I do.

Regards,

Donna Cosper, P.E., M.S.S.E.
Texas Commission on Environmental Quality

To: 'Donna Cosper' <donna.cosper@tceq.texas.gov>
Subject: Wastewater Flow vs. Treatment

Donna,

Thanks for your time on the phone. From our conversation, we understood that we could not issue a permit with a wastewater flowrate greater than 5,000 GPD. However, we could issue a permit that can treat more than 5,000 GPD as long as the permitted flow rate is less than 5,000 GPD. In this scenario, we would also require flow meters on the outflow of the treatment units demonstrating that the development is staying within the permitted flow rate. If the development went above the permitted flow rate or went over 5,000 GPD, it would trigger a violation that could only be resolved by getting a permit from the state.

Is this a correct summary of our discussion?

Thanks.

Robert Boyd, P.E.

APPLICATION FOR PERMIT FOR AUTHORIZATION TO CONSTRUCT AN ON-SITE SEWAGE FACILITY AND LICENSE TO OPERATE

System #3

Planning Materials & Site Evaluation as Required Completed By Kaeleigh Crandall

System Description Aerobic w/ drip irrigation

Size of Septic System Required Based on Planning Materials & Soil Evaluation

Tank Size(s) (Gallons) 2 Nuwater 1500 ATU Absorption/Application Area (Sq Ft) 8775ft²

Gallons Per Day (As Per TCEQ Table III) 1755gpd

(Sites generating more than 5000 gallons per day are required to obtain a permit through TCEQ.)

Is the property located over the Edwards Recharge Zone? ☐ Yes ☒ No

(If yes, the planning materials must be completed by a Registered Sanitarian (R.S.) or Professional Engineer (P.E.))

Is there an existing TCEQ approved WPAP for the property? ☐ Yes ☒ No

(If yes, the R.S. or P.E. shall certify that the OSSF design complies with provisions of the existing WPAP.)

If there is no existing WPAP, does the proposed development activity require a TCEQ approved WPAP? ☐ Yes ☒ No

(If yes, the R.S. or P.E. shall certify that the OSSF design complies with all provisions of the proposed WPAP. A Permit to Construct will not be issued for the proposed OSSF until the proposed WPAP has been approved by the appropriate regional office.)

Is the property located over the Edwards Contributing Zone? ☒ Yes ☐ No

Is there an existing TCEQ approval CZP for the property? ☐ Yes ☒ No

(If yes, the P.E. or R.S. shall certify that the OSSF design complies with all provisions of the existing CZP.)

If there is no existing CZP, does the proposed development activity require a TCEQ approved CZP? ☐ Yes ☒ No

(If yes, the R.S. or P.E. shall certify that the OSSF design will comply with all provisions of the proposed CZP. A Permit to Construct will not be issued for the proposed OSSF until the CZP has been approved by the appropriate regional office.)

Is this property within an incorporated city? ☐ Yes ☒ No

If yes, indicate the city: _____

VOID

By signing this application, I certify that:
- The information provided above is true and correct to the best of my knowledge.
- I affirmatively consent to the online posting/public release of my e-mail address associated with this permit application, as applicable.

Kaeleigh Crandall
Signature of Designer

9/30/24
Date

SITE EVALUATION AND CALCULATIONS

Site Evaluation:

Soil Texture:	Clay loam
Soil Structure:	Blocky
Soil Depth:	18" minimum
Restrictive Horizon:	At 18" min. from surface
Groundwater:	None encountered
Topography:	More than 2% slope on drainfield area

Determination: Site was determined to have a Class III soil. Due to the park layout and rock horizon an aerobic treatment unit followed by drip irrigation shall be installed.

VOID

Calculations:

System # 3 is designed for a total flow of 1755 gpd. Reference design 100-8196 for calculations and layout. Water saving devices are required throughout.

Q = 1755 gpd

Two NuWater Model B-1500 aerobic treatment unit, or equal, shall be installed. A 2000 gallon pre-treatment tank and 2000 gallon equalization tank shall be installed preceding the aerobic treatment unit. Following the aerobic treatment unit shall be a 3000 gallon pump tank. The tank system shall be followed by a drip irrigation system. (Reference the System Layout) Chlorinator is required for water entering pump tank compartment. Liquid type chlorination shall be used.

Ra = **0.20 gal. / sq. ft. / day,** **(For a Class III soil)**

A = Q / Ra, **A** = (1755 gal. / day) / (0.20 gal. / sq. ft. / day) = **8775 sq. ft.**

calculations continued on next page....

SITE EVALUATION AND CALCULATIONS

Calculations:

Emitter line shall be used which has emitters spaced at 2 foot intervals, and adjacent emitter lines shall also be spaced at 2 feet on center.

Required line length = A / 2 = (8775 sq. ft. / 2 sq. ft. per foot) = **4388 feet**
4500' of drip line shall be installed as shown on the System Layout

A 1 1/2" SCH 40 PVC supply line shall be used from the ATU systems pump tank to the drainfield. A 1 1/2" SCH 40 PVC return line from the drainfield back to the pump tank shall be provided. The system shall be set up in accordance with NuWater specifications. (Contact manufacturer for complete specifications and reference the System Layout and details)

NOTES FOR INSTALLER (if applicable):

Do not connect water softener back-wash to septic system.

The TCEQ allows washing machine water to be discharged into a separate gray water system unless the water contains human waste. Running this water out separate from the septic system can prolong the life of the system.

A Netafim 1 1/2" "Super Filter" 200 mesh/55 micron, shall be installed in a riser in the outlet line of the pump tank compartment.

Connect the 1 1/2" "Super Filter" and assemble in accordance with manufacturers specifications..

Contact NuWater dealer for complete specifications. All required specifications may not be contained in this design.

SITE EVALUATION AND CALCULATIONS

The design pressure at the emitters is as specified by the manufacturer.

The total length of supply and return pipe is as shown on the System Layout

Diameter of supply and return lines is as shown on the System Layout.

NOTES TO OWNER OF SYSTEM:
MAINTENANCE AND MANAGEMENT PRACTICES (if applicable):

An OSSF should not be treated as if it were a normal city sewer system.

The excessive use of in-sink garbage grinders and grease disposal should be avoided.

Do not use the toilet to dispose of trash, including tissues, cigarette butts, or other trash.

Septic tanks shall be cleaned before sludge accumulates to a point where it approaches the bottom of the outlet device to prevent solids from exiting the tank with the liquid.

Septic tanks should be cleaned every two-to-three years to prevent excessive sludge buildup.

Do not build driveways, storage buildings, or other structures over the treatment works or its disposal field.

Chemical additives or the so-called enzymes are not necessary for the operation of a septic tank. Some of these additives may be harmful to the tank's operation.

SITE EVALUATION AND CALCULATIONS

Soaps, detergents, bleaches, drain cleaners, and other household cleaning materials will very seldom affect the operation of the system. However, moderation should be exercised in the use of such materials.

It is not advisable to allow water softener back flush to enter into any portion of the OSSF.

Except for Aerobic systems, the liquid from the OSSF is still heavily laden with bacteria. Contact with this liquid should be avoided, if it surfaces.

WATER CONSERVATION MEASURES (if applicable):

Showers usually use less water than baths. Install a water saving shower head that uses less than 2 1/2 gallons per minute and saves both water and energy.

If you take a tub bath, reduce the level of water in the tub from the level to which you customarily fill it.

Leaky faucets and faulty toilet fill mechanisms should be repaired as quickly as possible.

Check toilets for leaks that may not be apparent. Add a few drops of food coloring to the tank. Do not flush. If the color appears in the bowl within a few minutes, the toilet fill or ball-cock valve needs to be adjusted to prevent water from overflowing the stand pipe, or the flapper at the bottom of the toilet tank needs to be replaced.

Reduce the amount of water used for flushing the toilet by installing one of the following: a new toilet (1.6 gallon); a toilet tank dam; or filling and capping one-quart plastic bottles with water (usually one is all that will fit in smaller toilet tanks) and lowering them into the tank of the existing 3.5 gallon or larger toilet. Do not use bricks since they may crumble and cause damage to the fixture.

SITE EVALUATION AND CALCULATIONS

Try to run the dishwasher with a full load, whenever possible.

Avoid running the water continuously for brushing teeth, washing hands, rinsing kitchen utensils, or for cleaning vegetables.

Use faucet aerators that restrict flow to no more than 2.2 gallons per minute to reduce water consumption.

Keep a container of drinking water in the refrigerator instead of running the faucet until the water turns cool.

Insulate all hot water pipes to avoid long delays of wasted water while waiting for the heated water.

Ask your city, county, or local government about their programs to conserve water, and how they can help you save water.

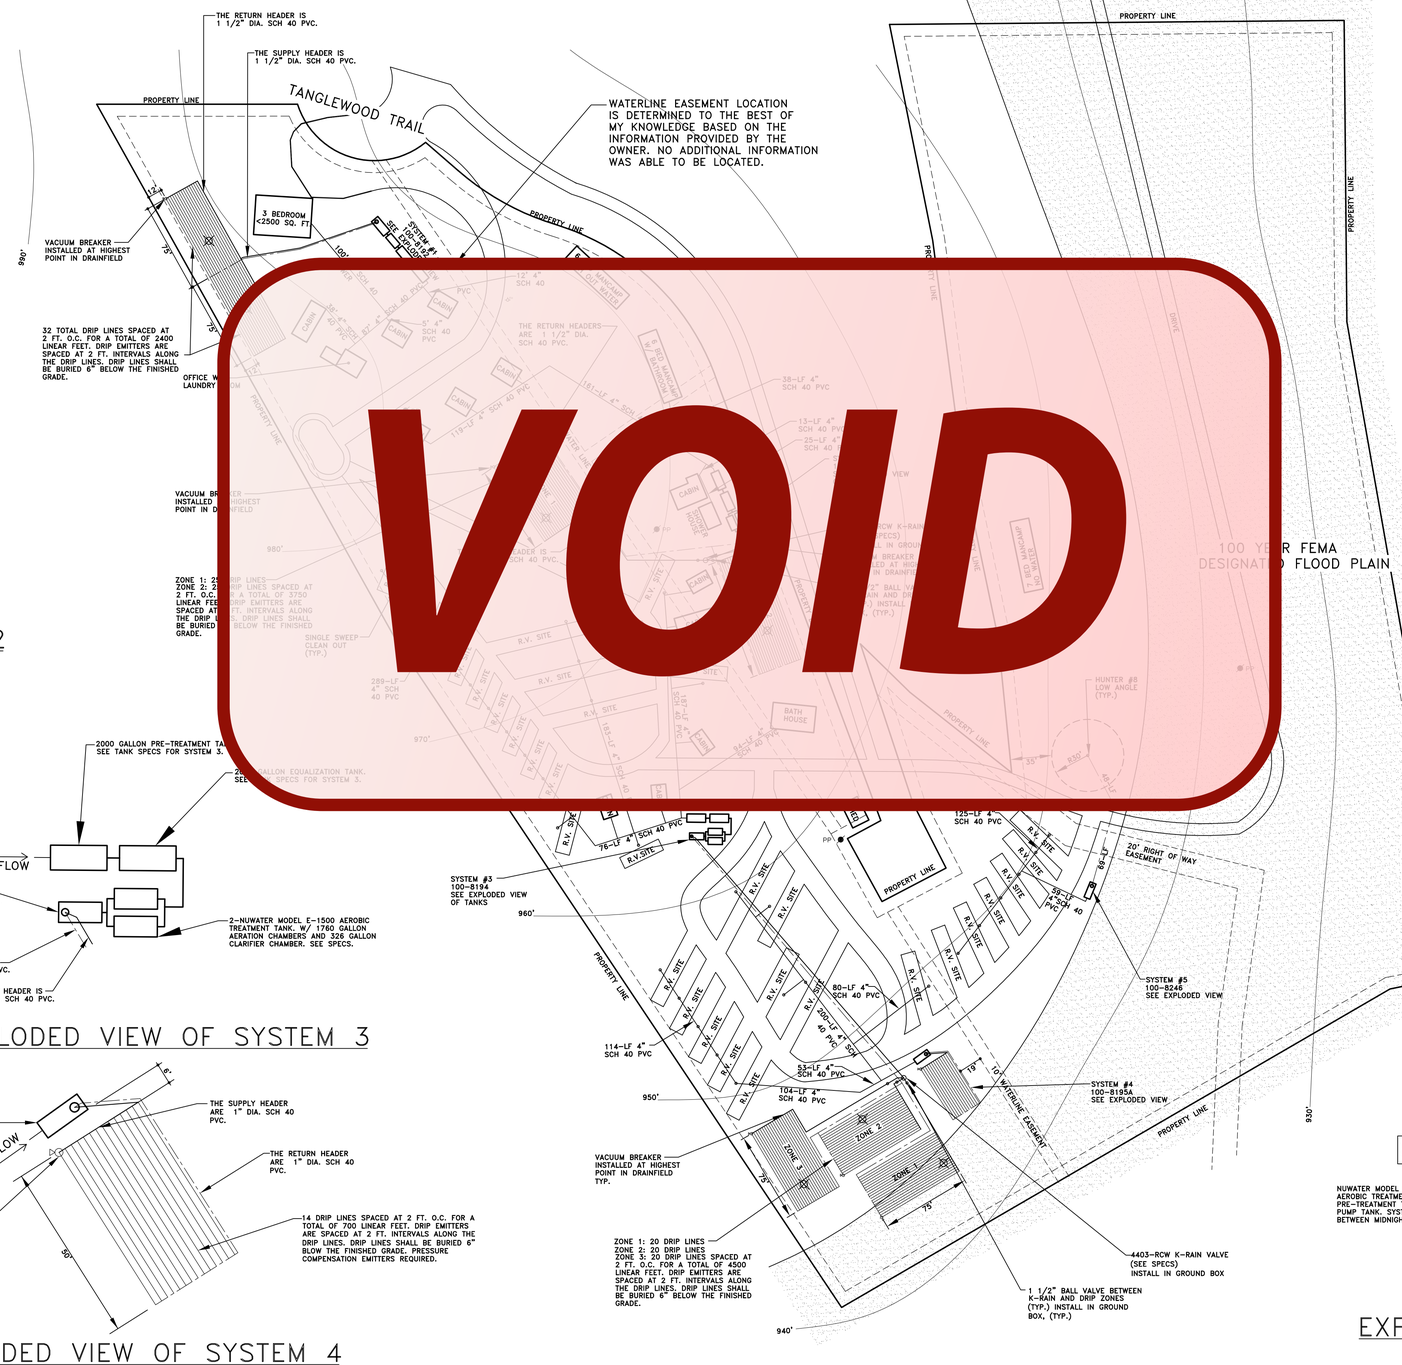
EXPLODED VIEW OF SYSTEM 1

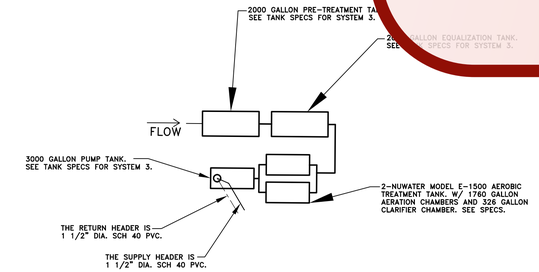
THIS EXISTING SYSTEM IS GRANDFATHERED IN, AS OF 9-28-21 REFERENCE EMAIL FROM ROBERT BOYD, P.E., COMAL COUNTY ASSISTANT ENGINEER. SYSTEM #1 IS PROPOSED FOR FUTURE REFERENCE ONLY. THIS SYSTEM SHALL BE PERMITTED BEFORE ANY CONSTRUCTION BEGINS.

EXPLODED VIEW OF SYSTEM 2

THE INSTALLATION OF THE 4 PROPOSED SEPTIC SYSTEMS WILL DISTURB LESS THAN 5 ACRES. THEREFORE PER 30 TAC 213.21, A CONTRIBUTING ZONE PLAN IS NOT REQUIRED FOR THIS ACTIVITY.

LEGEND:
- 10' UTILITIES EASEMENT
- DRIP SUPPLY LINE
- DRIP RETURN LINE
- SOIL EVALUATION POINTS ⊠



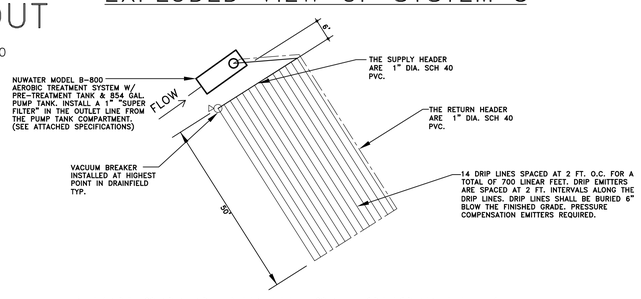


EXPLODED VIEW OF SYSTEM 3

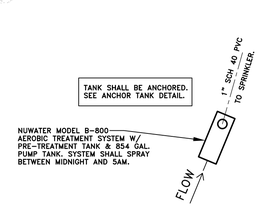
SCALE: 1" = 60'

SYSTEM LAYOUT

60 0 60 120



EXPLODED VIEW OF SYSTEM 4



EXPLODED VIEW OF SYSTEM 5

FLOAT SETTINGS & DISTANCES ABOVE THE INSIDE BOTTOM OF THE PUMP COMPT. ARE AS FOLLOWS:

ON: 21" - 338 GAL.
OFF: 20" - 322 GAL.
ALARM LEVEL: 43" - 693 GAL.
TANK INLET: 53" - 854 GAL.

DISTANCE BETWEEN ALARM LEVEL & TANK INLET IS 10" WHICH CORRESPONDS TO 161 GAL.

ALL SPRINKLERS ARE HUNTER PGP TYPE W/ LOW ANGLE NOZZLES

THE DISTRIBUTION LINE TO THE SPRINKLERS IS A 1" DIA. SCH 40 PVC LINE

SOIL SHALL BE PRESENT OVER ENTIRE SEPTIC SYSTEM SPRAY AREA. SPRAY AREA SHALL BE SEEDED WITH GRASS, EVERGREEN SHRUBS, BUSHES, TREES, OR LANDSCAPED BEDS CONTAINING MIXED VEGETATION MAY ALSO BE ADDED TO THE SPRAY AREA.

MANGOLD ENGINEERING COMPANY will not be responsible for the consequences of the use of any part of the engineering of this septic system before the engineering has been completely and finally approved by the appropriate county authority in the county for which it is intended. If test holes were not present during the site-evaluation, the owner/installer shall be responsible for digging test holes and contacting Mangold Engineering Company prior to any use of this engineering design.

SITE NOTES:

ALL EXISTING UNDERGROUND UTILITIES SHALL BE LOCATED AMD MARKED BEFORE ANY EXCAVATION BEGINS.

EXISTING WATER LINE LOCATIONS ARE UNDETERMINED. SEE WATER CASING NOTE AS REQUIRED.

WHERE A WATER LINE IS CLOSER THAN 10' TO A WASTEWATER MAIN, THE WATER LINE SHALL BE CASED INSIDE OF A SCH 40 PVC PIPE SUCH THAT THE ENDS OF THE CASING ARE AT LEAST. 10' AWAY FROM THE WASTEWATER MAIN. IN ADDITION, IF THE LINES CROSS, THE WATER LINE SHALL BE AT LEAST 6" ABOVE THE WASTEWATER MAIN.

WHERE DRAIN LINES PASS UNDER ROADWAYS, THEY SHALL BE SCH 80 PVC OR THEY SHALL BE SLEEVED INSIDE OF A SCH 40 PVC PIPE WHICH IS AT LEAST TWO NOMINAL PIPE SIZES LARGER THAN THE DRAIN LINE.

ALL ABANDONED SEPTIC TANKS SHALL BE LOCATED, PUMPED, BACKFILLED & CAVED-IN.

USE EXISTING SEWER LINES UNDER R.V. SITES WHERE POSSIBLE.

A TWO-WAY CLEAN OUT SHALL BE INSTALLED BETWEEN THE BUILDING AND AEROBIC TANKS.

WHEN CROSSING EASEMENT LINES, PERMISSION SHALL BE GRANTED BY THE EASEMENT HOLDER BEFORE ANY EXCAVATION BEGINS.

STANDARD NOTES:

1. SEPTIC TANK MUST BE A MINIMUM OF 50' FROM ANY WATER WELL. CLOSEST DISTANCE FROM ANY PART OF THE DRAINFIELD AREA TO A WATER WELL MUST BE 100' MINIMUM.
2. MINIMUM SETBACK OF SPRAY AREA FROM PROPERTY LINE IS 20'.
3. MINIMUM SETBACK OF DRIP AREA FROM PROPERTY LINE IS 5'.
4. MINIMUM SEPARATION DISTANCE BETWEEN SEPTIC TANK OR DRAINFIELD AREA AND WATER SUPPLY LINES IS 10'.
5. SETBACK OF SPRAY OR DRIP AREA FROM LAKES, STREAMS, PONDS, AND RIVERS IS 50' MINIMUM.
6. SLOPE OF INFLOW LINE TO TANK IS $\frac{1}{8}$ INCH PER FOOT RUN. PIPE IS 4" SCH 40 PVC.
7. SYSTEM SHALL BE INSPECTED BY THE COUNTY INSPECTOR IN ACCORDANCE WITH CURRENT COUNTY INSPECTION PROCEDURES.

Supplemental Calculations

SUPPLEMENTAL CALCULATIONS FOR DESIGN 100-8196

THE FLOW FOR EACH SYSTEM IS BASED ON WATER RECORDS PROVIDED BY THE OWNER OVER AN ENTIRE YEAR. THE MAXIMUM DAILY FLOW FOR THE PARK SHALL BE USED. A DIRECT RATIO WILL BE USED TO DETERMINE HOW THAT WATER IS DISTRIBUTED THROUGHOUT THE PARK. SEE CALCULATIONS BELOW.

MAXIMUM DAILY DEMAND FROM FEBRUARY LODGE WATER (100510 GALLONS) AND APRIL CABINS WATER RECORDS (30480 GALLONS)

100510 GALLONS / 28 DAYS OF FEBRUARY = 3590 GPD
30480 GALLONS / 30 DAYS OF APRIL = 1016 GPD
$Q_{TOTAL-PARK-WATER-USAGE}$ = 4606 GPD

DIRECT RATIO EQUATION:

$$\frac{Q_{TCEQ-COMPONENT}}{Q_{TCEQ-TOTAL-PARK}} = \frac{Q_{COMPONENT}}{Q_{TOTAL-PARK-WATER-RECORDS}}$$

3 BEDROOM <2500 SQ. FT. = 2 GPD
OFFICE W/5 EMPLOYEES Q= EMPLOYEES (4 GPD/ PERSON)=20 GPD
LAUNDRY ROOM W/ 4 WASHING MACHINES
Q= 4 WASHING MACHINES (200 GPD / MACHINE) = 800 GPD
3 CABINS (AS AN APARTMENT)
Q= 100 GPD/ CABIN (3 CABINS) = 300 GPD

$Q_{TCEQ\ COMPONENT}$ = 1360 GPD SYSTEM #1

FOR SYSTEM 2 $Q_{TCEQ\ COMPONENT}$:

4 CABINS (AS AN APARTMENT)
Q= 100 GPD/ CABIN (4 CABINS) = 400 GPD
6 BED MANCAMP WITH 1 COMMON BATHROOM (SIZED AS HOTEL ROOM)
Q = 60 GPD / BED (6 BEDS) = 360 GPD
SHOWER HOUSE Q = 1344 GPD (TOTAL BATH USAGE EQUALLY DIVIDED AMONGST BOTH SHOWER HOUSES. SEE CALCULATIONS FOR EXPLANATION)

$Q_{TCEQ\ COMPONENT}$ = 2104 GPD SYSTEM #2

SUPPLEMENTAL CALCULATIONS FOR DESIGN 100-8196

FOR SYSTEM 3 $Q_{TCEQ\ COMPONENT}$:

Q = 17 RV (40 GPD / RV) = 680 GPD
5 CABINS (AS AN APARTMENT)
Q= 100 GPD/ CABIN (5 CABINS) = 500 GPD
BATH HOUSE Q = 1344 GPD (TOTAL BATH USAGE EQUALLY DIVIDED AMONGST BOTH SHOWER HOUSES. SEE CALCULATIONS FOR EXPLANATION)

$Q_{TCEQ\ COMPONENT}$ = 2524 GPD SYSTEM #3

FOR SYSTEM 4 $Q_{TCEQ\ COMPONENT}$:

10 RV SITES (40 GPD) = 400 GPD

$Q_{TCEQ\ COMPONENT}$ = 400 GPD SYSTEM #4

6 RV SITES (40 GPD) = 240 GPD

$Q_{TCEQ\ COMPONENT}$ = 240 GPD SYSTEM #4

VOID

FLOW FOR BATH HOUSE & SHOWER HOUSE:

USAGE FROM RV Q= 28 GPD/ RV (33 TOTAL RV) = 924 GPD
USAGE FROM CAMPSITES
Q = 25 CAMPSITES (2 PEOPLE/ SITE) (28 GPD / SHOWER) = 1400 GPD
USAGE FROM MANCAMPS
Q = 13 BEDS (28 GPD) = 364 GPD

Q TOTAL = 2688 GPD FOR BOTH BATHHOUSE & SHOWER HOUSE

TOTAL FLOW FOR ENITRE PARK PER TCEQ:

$Q_{TCEQ-TOTAL-COMPONENT}$=1360 GPD + 2104 GPD + 2524 GPD + 400 GPD + 240 GPD= 6628 GPD

Specifications

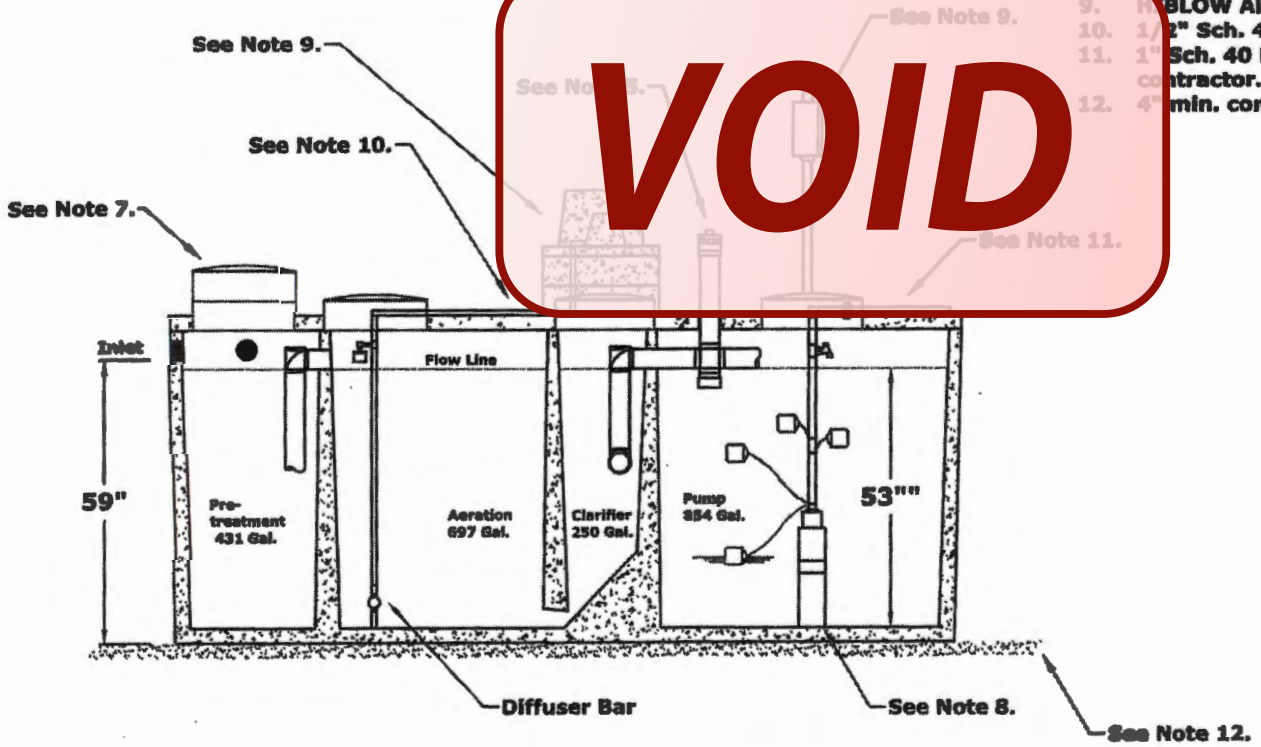
VOID

Assembly Details

OSSF

DIMENSIONS:
Outside Height: 67"
Outside Width: 75"
Outside Length: 164.5"

MINIMUM EXCAVATION DIMENSIONS:
Width: 87"
Length: 177"



GENERAL NOTES:

1. Plant structure material to be precast concrete and steel.
2. Maximum burial depth is 30" from slab top to grade.
3. Weight = 16,700 lbs.
4. Treatment capacity is 800 GPD. Pump compartment set-up for a 420 GPD Flow Rate (5 beedroom, < 4,501 sq/ft living aera). Please specify for additional set-up requirements. BOD Loading = 2.60 lbs. per day.
5. Standard tablet chlorinator or Optional Liquid chlorinator. NSF approved chlorinators (tablet & liquid) available.
6. Bio-Robix B-800 Control Center w/ Timer for night spray application. Optional Micro Dose (min/sec)timer available for drip applications. Electrical Requirement to be 115 Volts, 60 Hz, Single Phase, 30 AMP, Grounded Receptacle.
7. 20" Ø acess riser w/ lid (Typical 4). Optional extension risers available.
8. 20 GPM 1/2 HP, high head effluent pump.
9. [illegible]BLOW Air Compressor w/ concrete housing.
10. 1/2" Sch. 40 PVC Air Line (Max. 50 Lft from Plant).
11. 1" Sch. 40 PVC pipe to distribution system provided by contractor.
12. 4" min. compacted sand or gravel pad by Contractor

COMPARE THESE FEATURES

- Non-Clogging Vortex Impeller Design.
- Float operated, submersible (NEMA 6) 2 pole switch.
- Durable cast iron construction. Cast iron switch cap, motor, and pump housing.
- Stainless steel screws, bolts, handle, guard, arm and seal assembly.
- Engineered, glass-filled, plastic impeller with metal insert.
- UL-listed 3-wire cord and plug. 15 ft. cord standard for automatic & nonautomatic.
- Corrosion resistant powder coated epoxy finish.
- Thermal overload protection.
- Oil filled PSC motor - hermetically sealed.
- Engineered plastic base.
- .4 H.P. 115V & 230V, 1Ph., 60 cycle, 1725 RPM.
- Carbon and ceramic shaft seal.
- Oil Lubricated Bearings.
- Passes 2-inch spherical solids.
- 2" NPT Discharge.
- On point - 12½"
- Off point - 4½"

E264	230	1	Non	4.7	2 or 2 & 6	3 or 4 & 5

SELECTION GUIDE

1. Integral float operated 2-pole mechanical switch, no external control required.
2. Single piggyback variable level float switch, or double piggyback variable level float switch. Refer to FM0477.
3. Mechanical alternator M-Pak 10-0072 or 10-0075.
4. See FM0712 for correct model of electrical alternator.
5. Control switch 10-0225 used as a control activator specify duplex (3) or (4) float system.

For information on additional Zoeller products refer to catalog on Piggyback Variable Level Float Switches, FM0477; Electrical Alternator, FM0486; Mechanical Alternator, FM0495; Sump/Sewage Basins, FM0487; and Single Phase Simplex Pump Control, FM1596; Alarm System, FM0712.

⚠ CAUTION

All installation of controls, protection devices and wiring should be done by a qualified licensed electrician. All electrical and safety codes should be followed including the most recent National Electric Code (NEC) and the Occupational Safety and Health Act (OSHA).

RESERVE POWERED DESIGN

For unusual conditions a reserve safety factor is engineered into the design of every Zoeller pump.

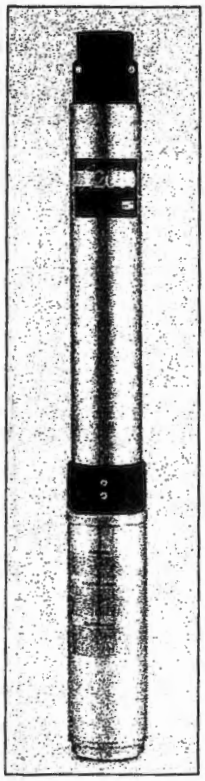
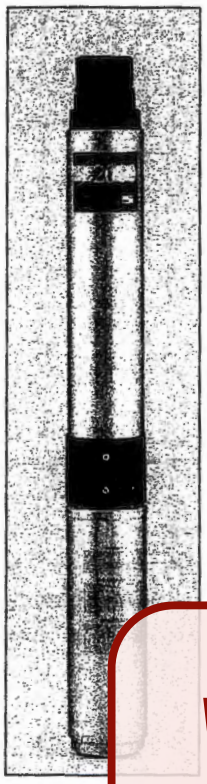
4" Submersible Pumps

Signature 2000®



5-7 GPM TrimLine™
Max O.D. = 3-3/4"



10-30 GPM Series
Max O.D. 3-7/8"

Series J
Composite and Stainless

Precision-engineered, corrosion-resistant Signature 2000® Series J pumps in 5, 7, 10, 15, 20 and 30 GPM models deliver efficient, dependable performance even in rough, aggressive water. Heads to over 700 feet and capacities to 45 GPM. Built to deliver long-term, trouble-free service.

These pumps feature the patented Signa-Seal™ staging system. Floating stack design resists sand and reduces sand locking.

The 5 & 7 GPM models are the smaller diameter, TrimLine™ design; 10, 15, 20, and 30 GPM are standard models.

MATERIALS

Shell – stainless steel

Discharge – fiberglass-reinforced thermoplastic

Discharge bearing – Nylatron®

Intermediate bearing – (on larger units) polycarbonate, nitrile rubber, and stainless steel

Impellers – Acetal

Diffusers – Polycarbonate

Suction caps – Polycarbonate with stainless steel insert

Thrust pads – proprietary spec.

Shaft and coupling – stainless steel

Intake – fiberglass-reinforced thermoplastic

Intake screen – polypropylene

Check valve – durable internal check valve

Cable guard – stainless steel

Agency Listings – UL 778, CSA and NSF

MANUAL DISC FILTERS

RELIABLE, EFFICIENT PLASTIC DISCS CREATE SUPERIOR FILTRATION

PRODUCT ADVANTAGES

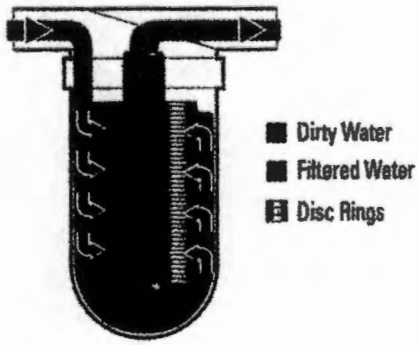
- Highly effective multiple disc ring design captures and holds more debris
- Greater holding capacity of the rings vs. screen filters means less frequent cleaning
- Rings are easily removed for fast cleaning without the need for scrubbing
- Color coded disc rings make identification of mesh rating fast and easy

THE FILTERING PROCESS

Grooved, compressed plastic disc rings produce a deep filtration process. As dirty water is pumped into the filter and pressure increases on the outside of the filter, the water pressure compresses the rings together tightly.

Grooves in the disc rings crisscross, forming a three dimensional network that traps particles. The number of crisscrossed intersection points on each groove varies, depending on filtration grade. The turbulence in the varying paths and the large number of intersections create an environment where particles are eventually trapped.

This design filters the dirty water thoroughly, not only on the outer surface of the cylindrical disc filter, but through the entire depth of every ring's grooves. The result is a larger, more efficient filtering area (when compared to screen filters) with more debris being captured and cleaner water exiting from the filter.



APPLICATIONS

- Primary irrigation filter for relatively clean or average water quality
- Protection of irrigation systems from clogging and/or abrasion

K-RAIN 4000

DISTRIBUTING VALVES

TRADITION OF EXCELLENCE IN IRRIGATION PRODUCTS.

FEATURES/BENEFITS

- 2 Year Trade Warranty. Factory support up to two years after purchase.
- **ABS Polymer Construction-** High-strength, non-corrosive body for long product life.
- **Available in 4 and 6 Outlet Models-** Can quickly and easily change from two to six watering zones.
- **Simplicity of Design-** Valves are easily maintained and serviced for long product life.
- **Operates at Low 10 GPM at Pressures of 25-75 PSI-** Reliably automates multiple zoned residential and small commercial irrigation or wastewater systems.

K RAIN

IRRIGATION SOLUTIONS WORLDWIDE™

K-RAIN MODEL 4000: DISTRIBUTING VALVE

The 4000 distributing valve offers a reliable, economical way to automate multiple zoned residential and small commercial irrigation systems. The simplicity of design and a minimum of moving parts ensures ease of maintenance and long service life.

These patented valves allow for the number of watering zones to be changed quickly and easily. They are ideally suited for both city water and pump applications and may also be used for onsite wastewater or effluent water applications.

The 4000 valve is available in 4 or 6 outlet models. A quick change of the cam allows the valve to operate from 2 to 6 zones. The valve will operate with flows as low as 1[illegible] GPM and at pressures of 25 to 75 PSI.

The distributing valve shall carry a [illegible]wo-year trade warranty against manufactur[illegible] defects.

EFFLUENT PUMPS

MENU

Little GIANT

C1 SERIES - 1/2 HP

APPLICATIONS

Gray water pumping, filtered effluent service water pumping,
water reclamation projects such as pumping from rain catchment basins,
aeration and other fountain or pond applications, agriculture and livestock water pumping

FEATURES

- Supplied with a removable 5" base for secure and reliable mounting
- Bottom suction design
- Robust thermoplastic discharge head design resists breakage during installation and operation
- Single shell housing desig provides a compact unit while ensuring cool and quiet operation
- Hydraulic components m ded from quality engineered plasti
- Optimized hydraulic desig allows for easy performance and power usage
- All metal components are made of hig stainl el for sist
- Available with a high qua ty 115 V or 2 2 hp moto
- Fluid flows of 10, 20, and 3 gpm, with a maximum shut-off pressure of 100 psi
- Heavy-duty 600 V 10 foot SJ W jacketed lead

Subject: Re: 113609, 113610, 113611, 113612

1. Certify that waterline crossing's equivalent protection complies with TAC 290

- Added note to the design see attached.

2. Provide the release of easement crossings

- The owners will take care of this.

✓ How is it determined that half the people will go to the Shower House and the other half to the Bath House

- This was already taken care of.

✓ System 3 application does not reflect the Bath House

Corrected see attachment.

✓ All systems will need to have a daily flow meter to provide daily meter readings once a month for 1 year.

- Updated note on drawing page to what we discussed on the phone.

✓ Present how system 1 will provide daily water use records

- Agreed to using the water meter for those facilities.

RE: 3660 Tanglewood Trail

Property Owner & Agent,

We received planning materials for the referenced permit application on 11-18-2021 and found those planning materials to be deficient. In order to continue processing this permit, we need the following:

1. System 3
    a. The drip lines that cross over the 100 year floodplain need to meet the requirements below.

§285.31. SELECTION CRITERIA FOR TREATMENT AND DISPOSAL SYSTEMS.

(a) General Requirement. The type and size of an OSSF shall be determined on t of the soil and site information developed according to §285.30 of this title (relating to Evaluation).

(b) Suitability. A standard subsurface absorption system may be used if all the s site criteria are determined to be suitable under §285.91(5) of this title (relating to Tabl one or more of the soil and site criteria categories are determined to be unsuitable, a sta subsurface absorption system cannot be used except as noted in §285.91(5) of this title. determined that a standard subsurface absorption system cannot be used, either a prop or a non-standard system may be used, provided all soil and site criteria for that system met as required in §285.91(13) of this title.

(c) Surface drainage criteria.

(1) Topography. Uniform slopes under 30% are suitable for standard sub absorption systems. If the slope is less than 2%, steps shall be taken to ensure there is a surface drainage over any subsurface disposal field. The excavation for a standard subsu absorption system shall be parallel to the contour of the ground.

(2) Flood hazard. Any potential OSSF site within a 100-year floodplain is to special planning requirements. The OSSF shall be located so that a flood will not dam OSSF during a flood event, resulting in contamination of the environment. Planning ma shall indicate how tank flotation is eliminated. Additionally, if the site is within the regu floodway, a professional engineer shall demonstrate that:

(A) the system shall not increase the height of the flood;

(B) all components, with the exception of risers, chlorinators, cle sprinklers, and inspection ports, shall be completely buried without adding fill; and

(C) non-buried components (e.g. alarms, junction boxes, and compressors) shall be elevated above the 100-year flood elevation.

(d) Separation requirements. OSSFs shall be separated from features, in the are the OSSF is to be installed, that could be contaminated by the OSSF or could prevent th operation of the system. The separation requirements are in §285.91(10) of this title.

Adopted May 23, 2001 Effective June

b.

2. System 4-5
    a. Per our inspectors notes, we will need a revision on the tank types that were used.
        i. System 4- Si Tank/ ProFlo control panel
        ii. System 5- Si Tank/ Areis Aerobic control panel
3. Per our conversation, since the tank on system 5 is not in the floodplain, it is to your discretion on the anchors for the tank.
4. Revise accordingly and resubmit.

If you have any questions, you can email me or call the office.

Thank You,

Brandon Olvera | Designated Representative | Comal County | www.cceo.org

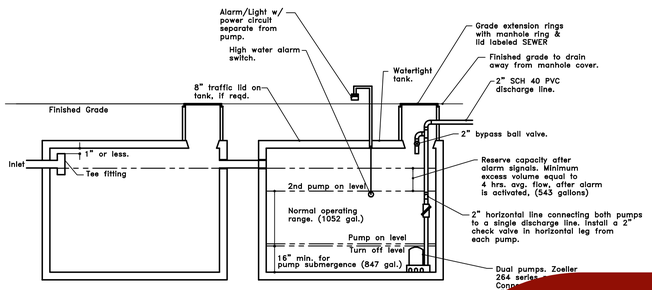
SYSTEM #2 TANK SPECS:



2000 GAL. PRE-TREATMENT TANK & 4500 GALLON EQUALIZATION T

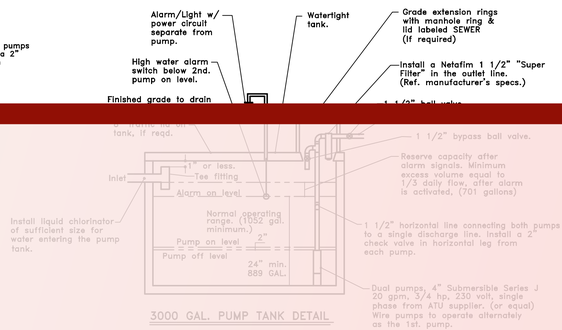
SET VALVES, FLOATS, AND TIMERS TO DELIVER A MAXIMUM OF 16 GAL./MIN., AND 61 GALLONS PER HOUR TO THE AEROBIC TREATMENT UNITS, TOTAL.

NOTES:

THE ALARM ON LEVEL SHALL BE BELOW THE 2ND PUMP ON LEVEL. THE ALARM SYSTEM SHALL HAVE A LOCK-ON FEATURE SO THAT ONCE IT IS ACTIVATED, IT WILL NOT GO OFF WHEN THE 2ND PUMP DRAWS THE LIQUID LEVEL BELOW THE ALARM ON LEVEL. BOTH AUDIO AND VISUAL ALARMS SHALL HAVE A MANUAL SILENCE SWITCH.

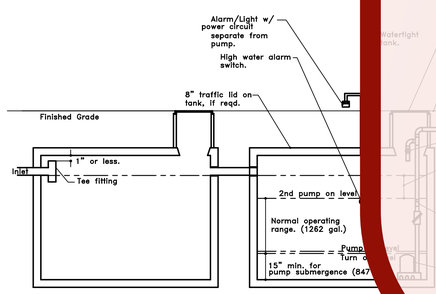
ALL ELECTRICAL WIRING SHALL BE IN ACCORDANCE WITH THE MOST RECENT EDITION OF THE NATIONAL ELECTRIC CODE. CONNECTIONS SHALL BE IN APPROVED JUNCTION BOXES AND ALL EXTERNAL POWER WIRING SHALL BE IN APPROVED ELECTRICAL CONDUIT, BURIED, AND TERMINATED AT A MAIN CIRCUIT BREAKER PANEL OR SUB-PANEL. ALL ELECTRICAL COMPONENTS SHOULD HAVE AN ELECTRICAL DISCONNECT WITHIN DIRECT VISION. ELECTRICAL DISCONNECTS MUST BE WEATHERPROOF (APPROVED FOR OUTDOOR USE) AND HAVE MAINTENANCE LOCKOUT PROVISIONS.

USE A LARGER TANK IF REQUIRED TO MEET MINIMUM STORAGE REQUIREMENTS.



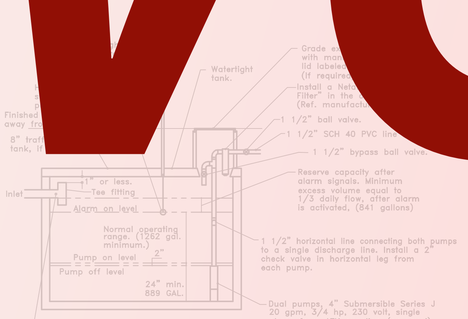
3000 GAL. PUMP TANK DETAIL

SYSTEM #3 TANK SPECS:



2000 GAL. PRE-TREATMENT TANK & 4500 GALLON EQUALIZATION

SET VALVES, FLOATS, AND TIMERS TO DELIVER A MAXIMUM OF 16 GAL./MIN., AND 74 GALLONS PER HOUR TO THE AEROBIC TREATMENT UNITS, TOTAL.



3000 GAL. PUMP TANK DETAIL

THE ALARM ON LEVEL SHALL BE BELOW THE 2ND PUMP ON LEVEL. THE ALARM SYSTEM SHALL HAVE A LOCK-ON FEATURE SO THAT ONCE IT IS ACTIVATED, IT WILL NOT GO OFF WHEN THE 2ND PUMP DRAWS THE LIQUID LEVEL BELOW THE ALARM ON LEVEL. BOTH AUDIO AND VISUAL ALARMS SHALL HAVE A MANUAL SILENCE SWITCH.

ALL ELECTRICAL WIRING SHALL BE IN ACCORDANCE WITH THE MOST RECENT EDITION OF THE NATIONAL ELECTRIC CODE. CONNECTIONS SHALL BE IN APPROVED JUNCTION BOXES AND ALL EXTERNAL POWER WIRING SHALL BE IN APPROVED ELECTRICAL CONDUIT, BURIED, AND TERMINATED AT A MAIN CIRCUIT BREAKER PANEL OR SUB-PANEL. ALL ELECTRICAL COMPONENTS SHOULD HAVE AN ELECTRICAL DISCONNECT WITHIN DIRECT VISION. ELECTRICAL DISCONNECTS MUST BE WEATHERPROOF (APPROVED FOR OUTDOOR USE) AND HAVE MAINTENANCE LOCKOUT PROVISIONS.

USE A LARGER TANK IF REQUIRED TO MEET MINIMUM STORAGE REQUIREMENTS.

CALCULATIONS TO DETERMINE PERMITTED FLOW FOR COMAL COUNTY:

THE PERMITTED FLOW FOR EACH SYSTEM IS BASED ON WATER RECORDS PROVIDED BY THE OWNER OVER AN ENTIRE YEAR. THE TCEQ DAILY FLOW FOR THE PARK SHALL BE USED TO SIZE EACH SYSTEM. A DIRECT RATIO WILL BE USED TO DETERMINE HOW THAT WATER IS DISTRIBUTED THROUGHOUT THE PARK FOR THE PERMIT APPLICATIONS. SEE CALCULATIONS BELOW.

MAXIMUM DAILY DEMAND FROM FEBRUARY LODGE WATER (100510 GALLONS) AND APRIL CABINS WATER RECORDS (30480 GALLONS)

100510 GALLONS / 28 DAYS OF FEBRUARY = 3590 GPD
30480 GALLONS / 30 DAYS OF APRIL = 1016 GPD
$Q_{TOTAL-PARK-WATER-USAGE}$ = 4606 GPD

DIRECT RATIO EQUATION:

$$\frac{Q_{TCEQ-COMPONENT}}{Q_{TCEQ-TOTAL-PARK}} = \frac{Q_{COMPONENT}}{Q_{TOTAL-PARK-WATER-RECORDS}}$$

FOR SYSTEM 1 $Q_{TCEQ\ COMPONENT}$:

3 BEDROOM <2500 SQ. FT. Q = 240 GPD
OFFICE W/5 EMPLOYEES Q= 5 EMPLOYEES(4 GPD/ PERSON)=20 GPD
LAUNDRY ROOM W/ 4 WASHING MACHINES
Q= 4 WASHING MACHINES (200 GPD / MACHINE) = 800 GPD
3 CABINS (AS AN APARTMENT)
Q= 100 GPD/ CABIN (3 CABINS) = 300 GPD

$Q_{TCEQ\ COMPONENT}$ = 1360 GPD SYSTEM #1

4 CABINS (AS AN APARTMENT)
Q= 100 GPD/ CABIN (4 CABINS) = 400 GPD
6 BED MANCAMP WITH 1 COMMON BATHROOM (SIZED AS HOTEL ROOM)
Q = 60 GPD / BED (6 BEDS) = 360 GPD
SHOWER HOUSE Q = 1344 GPD (TOTAL BATH USAGE EQUALLY DIVIDED AMONGST BOTH SHOWER HOUSES. SEE CALCULATIONS FOR EXPLANATION)

$Q_{TCEQ\ COMPONENT}$ = 2104 GPD SYSTEM #2

FOR SYSTEM 3 $Q_{TCEQ\ COMPONENT}$:

Q = 17 RV (40 GPD / RV) = 680 GPD
5 CABINS (AS AN APARTMENT)
Q= 100 GPD/ CABIN (5 CABINS) = 500 GPD
BATH HOUSE Q = 1344 GPD (TOTAL BATH USAGE EQUALLY DIVIDED AMONGST BOTH SHOWER HOUSES. SEE CALCULATIONS FOR EXPLANATION)

THE INSTALLATION OF THE 4 PROPOSED SEPTIC SYSTEMS WILL DISTURB LESS THAN 5 ACRES. THEREFORE PER 30 TAC 213.21, A CONTRIBUTING ZONE PLAN IS NOT REQUIRED FOR THIS ACTIVITY.

LEGEND:
10' UTILITIES EASEMENT
DRIP SUPPLY LINE
DRIP RETURN LINE
SOIL EVALUATION POINTS

THIS EXISTING SYSTEM #1 IS GRAND FATHERED IN, AS OF 9-28-21 REFERENCE EMAIL FROM ROBERT BOYD, P.E., COMAL COUNTY ASSISTANT ENGINEER.

WATERLINE EASEMENT LOCATION IS DETERMINED TO THE BEST OF MY KNOWLEDGE BASED ON THE INFORMATION PROVIDED BY THE OWNER. NO ADDITIONAL INFORMATION WAS ABLE TO BE LOCATED.

MANGOLD ENGINEERING COMPANY WILL NOT BE RESPONSIBLE FOR THE CONSEQUENCES OF THE USE OF ANY PART OF THE ENGINEERING OF THIS SEPTIC SYSTEM BEFORE THE ENGINEERING HAS BEEN COMPLETELY AND FINALLY APPROVED BY THE APPROPRIATE COUNTY AUTHORITY IN THE COUNTY FOR WHICH IT IS INTENDED. IF TEST HOLES WERE NOT PRESENT DURING THE SITE-EVALUATION, THE OWNER/INSTALLER SHALL BE RESPONSIBLE FOR DIGGING TEST HOLES AND CONTACTING MANGOLD ENGINEERING COMPANY PRIOR TO ANY USE OF THIS ENGINEERING DESIGN.

SITE NOTES:

ALL EXISTING UNDERGROUND UTILITIES SHALL BE LOCATED AMD MARKED BEFORE ANY EXCAVATION BEGINS.

EXISTING WATER LINE LOCATIONS ARE UNDETERMINED. SEE WATER CASING NOTE AS REQUIRED.

WHERE A WATER LINE IS CLOSER THAN 10' TO A WASTEWATER MAIN, THE WATER LINE SHALL BE CASED INSIDE OF A SCH 40 PVC PIPE SUCH THAT THE ENDS OF THE CASING ARE AT LEAST. 10' AWAY FROM THE WASTEWATER MAIN. IN ADDITION, IF THE LINES CROSS, THE WATER LINE SHALL BE AT LEAST 6" ABOVE THE WASTEWATER MAIN.

WHERE DRAIN LINES PASS UNDER ROADWAYS, THEY SHALL BE SCH 80 PVC OR THEY SHALL BE SLEEVED INSIDE OF A SCH 40 PVC PIPE WHICH IS AT LEAST TWO NOMINAL PIPE SIZES LARGER THAN THE DRAIN LINE.

ALL ABANDONED SEPTIC TANKS SHALL BE LOCATED, PUMPED, BACKFILLED & CAVED-IN.

USE EXISTING SEWER LINES UNDER R.V. SITES WHERE POSSIBLE.

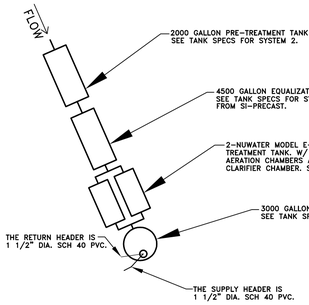
A TWO-WAY CLEAN OUT SHALL BE INSTALLED BETWEEN THE BUILDING AND AEROBIC TANKS.

WHEN CROSSING EASEMENT LINES, PERMISSION SHALL BE GRANTED BY THE EASEMENT HOLDER BEFORE ANY EXCAVATION BEGINS.

STANDARD NOTES:

1. SEPTIC TANK MUST BE A MINIMUM OF 50' FROM ANY WATER WELL. CLOSEST DISTANCE FROM ANY PART OF THE DRAINFIELD AREA TO A WATER WELL MUST BE 100' MINIMUM.
2. MINIMUM SETBACK OF SPRAY AREA FROM PROPERTY LINE IS 20'.
3. MINIMUM SETBACK OF DRIP AREA FROM PROPERTY LINE IS 5'.
4. MINIMUM SEPARATION DISTANCE BETWEEN SEPTIC TANK OR DRAINFIELD AREA AND WATER SUPPLY LINES IS 10'.
5. SETBACK OF SPRAY OR DRIP AREA FROM LAKES, STREAMS, PONDS, AND RIVERS IS 50' MINIMUM.
6. SLOPE OF INFLOW LINE TO TANK IS $\frac{1}{8}$ INCH PER FOOT RUN. PIPE IS 4" SCH 40 PVC.
7. WHERE PARALLEL SEWER AND NEW WATER LINES ARE CLOSER THAN 9' THE REQUIREMENTS SPECIFIED IN TCEQ, SUBCHAPTER D, 290.44(e)(4)(A) SHALL BE STRICTLY FOLLOWED.
8. WHERE SEWER AND NEW WATER LINES CROSS, THE REQUIREMENTS SPECIFIED IN TCEQ, SUBCHAPTER D, 290.44(e)(4)(B) SHALL BE STRICTLY FOLLOWED.
9. SYSTEM SHALL BE INSPECTED BY THE COUNTY INSPECTOR IN ACCORDANCE WITH CURRENT COUNTY INSPECTION PROCEDURES.

PER COUNTY REQUIREMENTS, A FLOW METER SHALL BE INSTALLED ON THE SUPPLY LINE AND RETURN LINE OF EACH AEROBIC UNIT FOLLOWED BY A DRIP IRRIGATION SYSTEM. FOR THE AEROBIC UNIT WITH SPRAY ONLY ONE METER SHALL BE INSTALLED ON THE SUPPLY LINE TO THE SPRINKLER. THE FLOW TO EACH SEPTIC SYSTEM SHALL BE METERED. EACH SYSTEM SHALL BE MONITORED, RECORDED & SUBMITTED TO COMAL COUNTY FOR ONE YEAR TO VERIFY NO MORE THAN THE PERMITTED FLOW IS USED FOR EACH SYSTEM.



EXPLODED VIEW OF SYSTEM 2

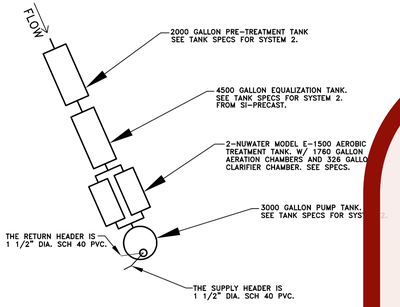
THE INSTALLATION OF THE 4 PROPOSED SEPTIC SYSTEMS WILL DISTURB LESS THAN 5 ACRES. THEREFORE PER 30 TAC 213.21, A CONTRIBUTING ZONE PLAN IS NOT REQUIRED FOR THIS ACTIVITY.

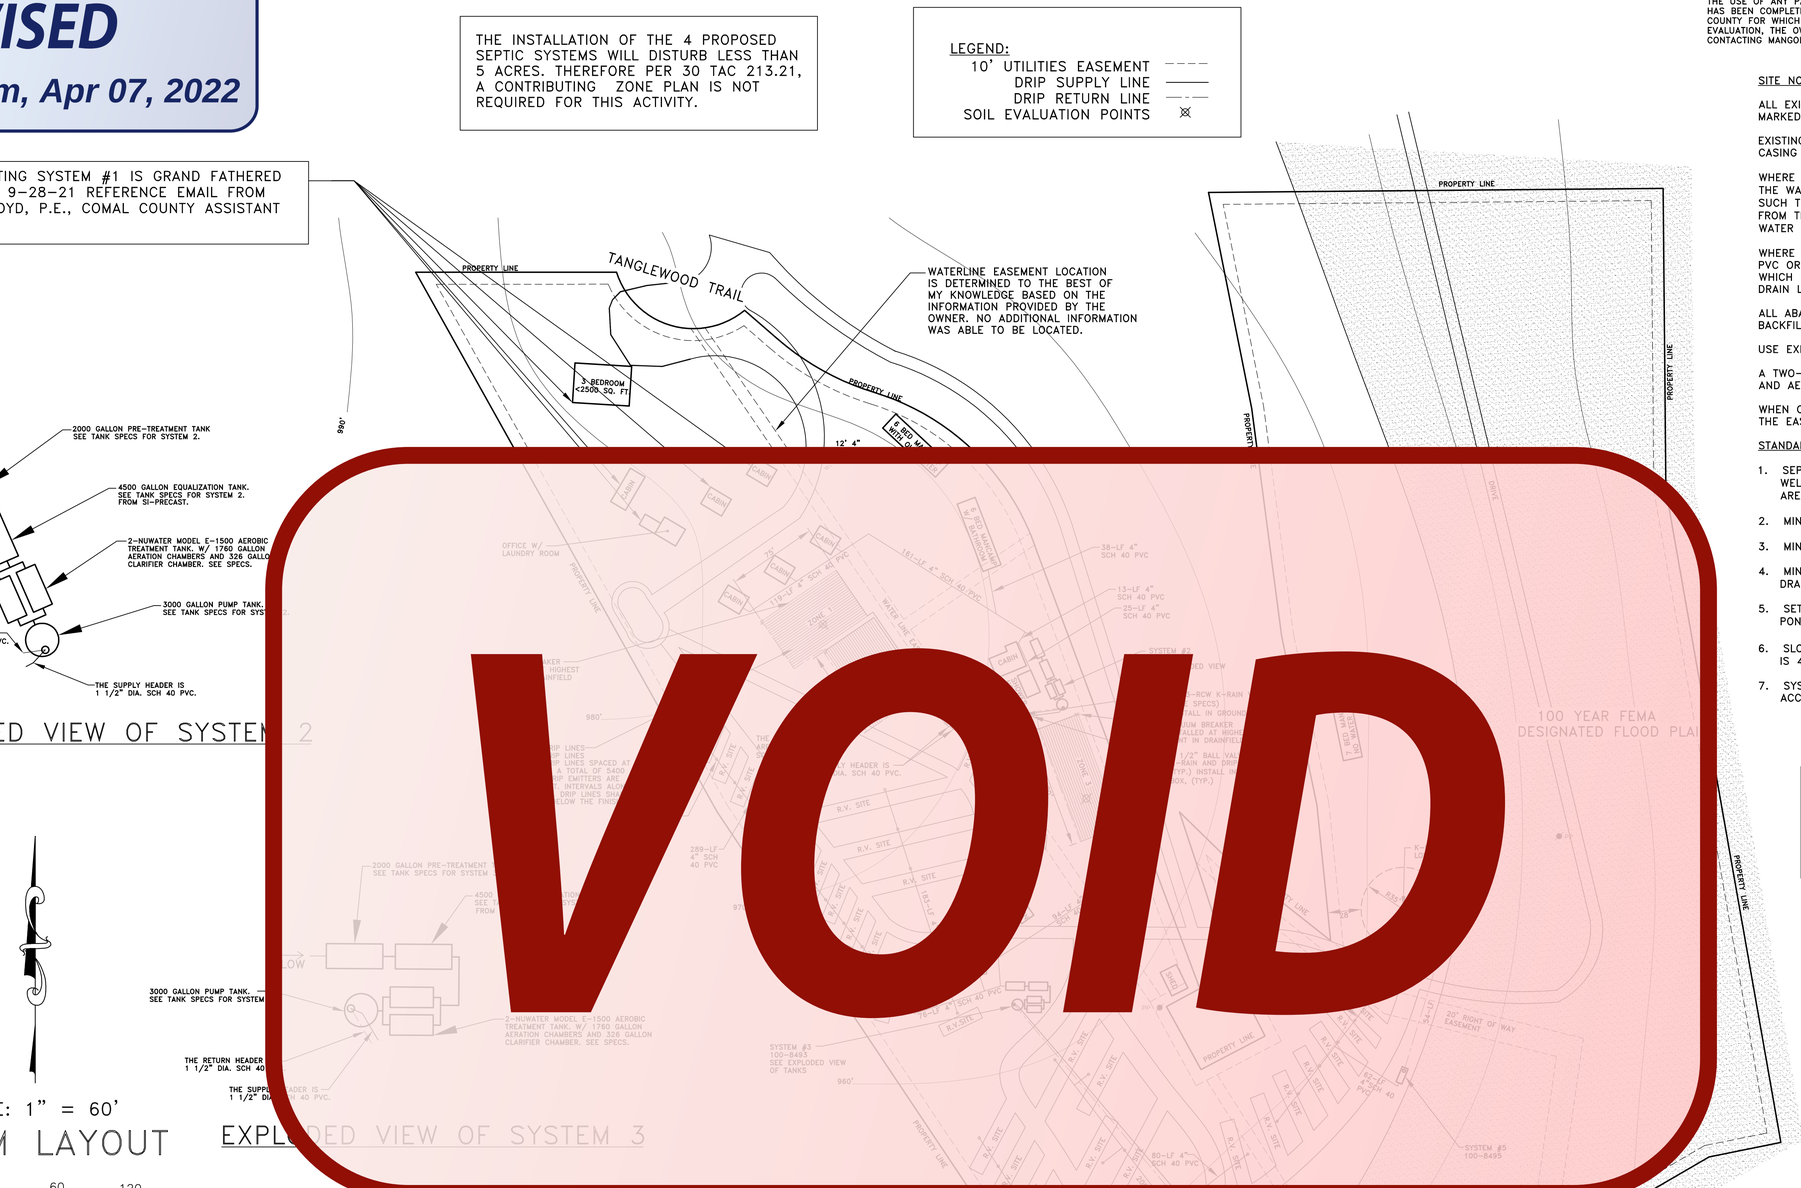
LEGEND:
10' UTILITIES EASEMENT
DRIP SUPPLY LINE
DRIP RETURN LINE
SOIL EVALUATION POINTS

THIS EXISTING SYSTEM #1 IS GRAND FATHERED IN, AS OF 9-28-21 REFERENCE EMAIL FROM ROBERT BOYD, P.E., COMAL COUNTY ASSISTANT ENGINEER.

WATERLINE EASEMENT LOCATION IS DETERMINED TO THE BEST OF MY KNOWLEDGE BASED ON THE INFORMATION PROVIDED BY THE OWNER. NO ADDITIONAL INFORMATION WAS ABLE TO BE LOCATED.



EXPLODED VIEW OF SYSTEM 2

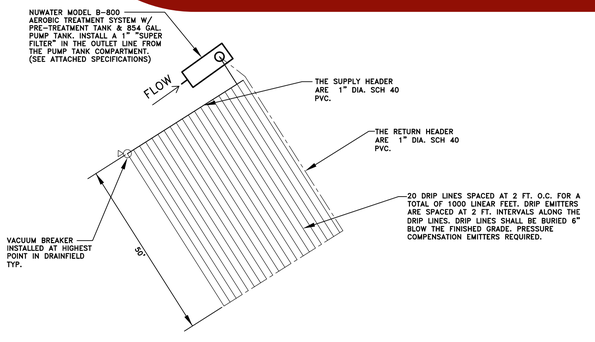


SCALE: 1" = 60'

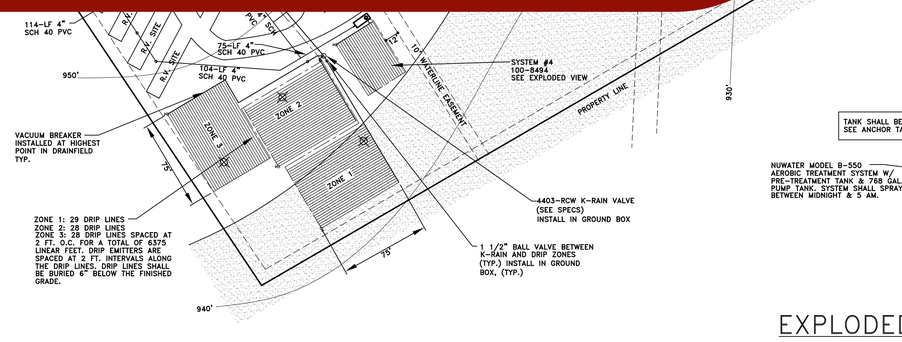
SYSTEM LAYOUT

60 0 60 120

EXPLODED VIEW OF SYSTEM 3

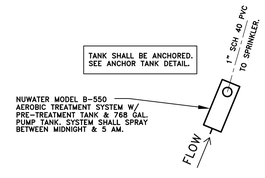


EXPLODED VIEW OF SYSTEM 4



EXPLODED VIEW OF SYSTEM 5

PER COUNTY REQUIREMENTS, THE FLOW TO EACH SEPTIC SYSTEM SHALL BE METERED. CONTACT COUNTY TO DETERMINE AN ACCEPTABLE METERING PROCESS.



FLOAT SETTINGS & DISTANCES ABOVE THE INSIDE BOTTOM OF THE PUMP COMPT. ARE AS FOLLOWS:

ON: 21" - 304 GAL.
OFF: 20" - 290 GAL.
ALARM LEVEL: 43" - 623 GAL.
TANK INLET: 53" - 768 GAL.

DISTANCE BETWEEN ALARM LEVEL & TANK INLET IS 10" WHICH CORRESPONDS TO 145 GAL.

ALL SPRINKLERS ARE K-RAIN TYPE W/ LOW ANGLE NOZZLES

THE DISTRIBUTION LINE TO THE SPRINKLERS IS A 1" DIA. SCH 40 PVC LINE

SOIL SHALL BE PRESENT OVER ENTIRE SEPTIC SYSTEM SPRAY AREA. SPRAY AREA SHALL BE SEEDED WITH GRASS, EVERGREEN SHRUBS, BUSHES, TREES, OR LANDSCAPED BEDS CONTAINING MIXED VEGETATION MAY ALSO BE ADDED TO THE SPRAY AREA.

MANGOLD ENGINEERING COMPANY WILL NOT BE RESPONSIBLE FOR THE CONSEQUENCES OF THE USE OF ANY PART OF THE ENGINEERING OF THIS SEPTIC SYSTEM BEFORE THE ENGINEERING HAS BEEN COMPLETELY AND FINALLY APPROVED BY THE APPROPRIATE COUNTY AUTHORITY IN THE COUNTY FOR WHICH IT IS INTENDED. IF TEST HOLES WERE NOT PRESENT DURING THE SITE-EVALUATION, THE OWNER/INSTALLER SHALL BE RESPONSIBLE FOR DIGGING TEST HOLES AND CONTACTING MANGOLD ENGINEERING COMPANY PRIOR TO ANY USE OF THIS ENGINEERING DESIGN.

SITE NOTES:

ALL EXISTING UNDERGROUND UTILITIES SHALL BE LOCATED AMD MARKED BEFORE ANY EXCAVATION BEGINS.

EXISTING WATER LINE LOCATIONS ARE UNDETERMINED. SEE WATER CASING NOTE AS REQUIRED.

WHERE A WATER LINE IS CLOSER THAN 10' TO A WASTEWATER MAIN, THE WATER LINE SHALL BE CASED INSIDE OF A SCH 40 PVC PIPE SUCH THAT THE ENDS OF THE CASING ARE AT LEAST. 10' AWAY FROM THE WASTEWATER MAIN. IN ADDITION, IF THE LINES CROSS, THE WATER LINE SHALL BE AT LEAST 6" ABOVE THE WASTEWATER MAIN.

WHERE DRAIN LINES PASS UNDER ROADWAYS, THEY SHALL BE SCH 80 PVC OR THEY SHALL BE SLEEVED INSIDE OF A SCH 40 PVC PIPE WHICH IS AT LEAST TWO NOMINAL PIPE SIZES LARGER THAN THE DRAIN LINE.

ALL ABANDONED SEPTIC TANKS SHALL BE LOCATED, PUMPED, BACKFILLED & CAVED-IN.

USE EXISTING SEWER LINES UNDER R.V. SITES WHERE POSSIBLE.

A TWO-WAY CLEAN OUT SHALL BE INSTALLED BETWEEN THE BUILDING AND AEROBIC TANKS.

WHEN CROSSING EASEMENT LINES, PERMISSION SHALL BE GRANTED BY THE EASEMENT HOLDER BEFORE ANY EXCAVATION BEGINS.

STANDARD NOTES:

1. SEPTIC TANK MUST BE A MINIMUM OF 50' FROM ANY WATER WELL. CLOSEST DISTANCE FROM ANY PART OF THE DRAINFIELD AREA TO A WATER WELL MUST BE 100' MINIMUM.
2. MINIMUM SETBACK OF SPRAY AREA FROM PROPERTY LINE IS 20'.
3. MINIMUM SETBACK OF DRIP AREA FROM PROPERTY LINE IS 5'.
4. MINIMUM SEPARATION DISTANCE BETWEEN SEPTIC TANK OR DRAINFIELD AREA AND WATER SUPPLY LINES IS 10'.
5. SETBACK OF SPRAY OR DRIP AREA FROM LAKES, STREAMS, PONDS, AND RIVERS IS 50' MINIMUM.
6. SLOPE OF INFLOW LINE TO TANK IS $\frac{1}{8}$ INCH PER FOOT RUN. PIPE IS 4" SCH 40 PVC.
7. SYSTEM SHALL BE INSPECTED BY THE COUNTY INSPECTOR IN ACCORDANCE WITH CURRENT COUNTY INSPECTION PROCEDURES.

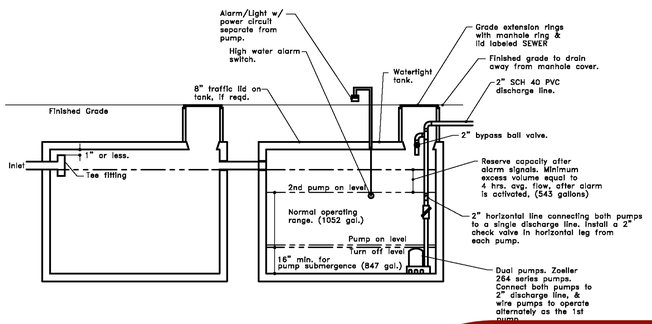
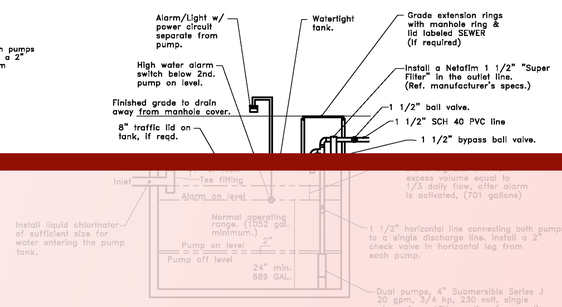
SYSTEM #2 TANK SPECS:



2000 GAL. PRE-TREATMENT TANK & 4500 GALLON EQUALIZATION TANK

SET VALVES, FLOATS, AND TIMERS TO DELIVER A MAXIMUM OF 16 GAL./MIN. AND 61 GALLONS PER HOUR TO THE AEROBIC TREATMENT UNITS, TOTAL.



3000 GAL. PUMP TANK DETAIL

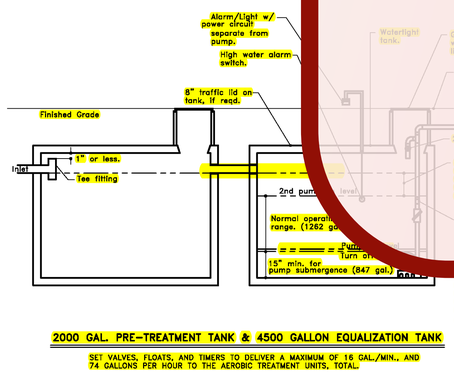
NOTES:

THE ALARM ON LEVEL SHALL BE BELOW THE 2ND PUMP ON LEVEL. THE ALARM SYSTEM SHALL HAVE A LOCK-ON FEATURE SO THAT ONCE IT IS ACTIVATED, IT WILL NOT GO OFF WHEN THE 2ND PUMP DRAWS THE LIQUID LEVEL BELOW THE ALARM ON LEVEL. BOTH AUDIO AND VISUAL ALARMS SHALL HAVE A MANUAL SILENCE SWITCH.

ALL ELECTRICAL WIRING SHALL BE IN ACCORDANCE WITH THE MOST RECENT EDITION OF THE NATIONAL ELECTRIC CODE. CONNECTIONS SHALL BE IN APPROVED JUNCTION BOXES AND ALL EXTERNAL POWER WIRING SHALL BE IN APPROVED ELECTRICAL CONDUIT, BURIED, AND TERMINATED AT A MAIN CIRCUIT BREAKER PANEL OR SUB-PANEL. ALL ELECTRICAL COMPONENTS SHOULD HAVE AN ELECTRICAL DISCONNECT WITHIN DIRECT VISION. ELECTRICAL DISCONNECTS MUST BE WEATHERPROOF (APPROVED FOR OUTDOOR USE) AND HAVE MAINTENANCE LOCKOUT PROVISIONS.

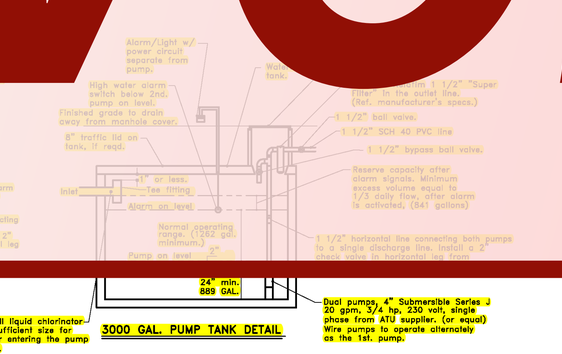
USE A LARGER TANK IF REQUIRED TO MEET MINIMUM STORAGE REQUIREMENTS.

SYSTEM #3 TANK SPECS:



2000 GAL. PRE-TREATMENT TANK & 4500 GALLON EQUALIZATION TANK

SET VALVES, FLOATS, AND TIMERS TO DELIVER A MAXIMUM OF 16 GAL./MIN., AND 74 GALLONS PER HOUR TO THE AEROBIC TREATMENT UNITS, TOTAL.



3000 GAL. PUMP TANK DETAIL

NOTES:

THE ALARM ON LEVEL SHALL BE BELOW THE 2ND PUMP ON LEVEL. THE ALARM SYSTEM SHALL HAVE A LOCK-ON FEATURE SO THAT ONCE IT IS ACTIVATED, IT WILL NOT GO OFF WHEN THE 2ND PUMP DRAWS THE LIQUID LEVEL BELOW THE ALARM ON LEVEL. BOTH AUDIO AND VISUAL ALARMS SHALL HAVE A MANUAL SILENCE SWITCH.

CONNECTIONS SHALL BE IN APPROVED JUNCTION BOXES AND ALL EXTERNAL POWER WIRING SHALL BE IN APPROVED ELECTRICAL CONDUIT, BURIED, AND TERMINATED AT A MAIN CIRCUIT BREAKER PANEL OR SUB-PANEL. ALL ELECTRICAL COMPONENTS SHOULD HAVE AN ELECTRICAL DISCONNECT WITHIN DIRECT VISION. ELECTRICAL DISCONNECTS MUST BE WEATHERPROOF (APPROVED FOR OUTDOOR USE) AND HAVE MAINTENANCE LOCKOUT PROVISIONS.

USE A LARGER TANK IF REQUIRED TO MEET MINIMUM STORAGE REQUIREMENTS.

CALCULATIONS TO DETERMINE PERMITTED FLOW FOR COMAL COUNTY:

THE PERMITTED FLOW FOR EACH SYSTEM IS BASED ON WATER RECORDS PROVIDED BY THE OWNER OVER AN ENTIRE YEAR. THE TCEQ DAILY FLOW FOR THE PARK SHALL BE USED TO SIZE EACH SYSTEM. A DIRECT RATIO WILL BE USED TO DETERMINE HOW THAT WATER IS DISTRIBUTED THROUGHOUT THE PARK FOR THE PERMIT APPLICATIONS. SEE CALCULATIONS BELOW.

MAXIMUM DAILY DEMAND FROM FEBRUARY LODGE WATER (100510 GALLONS) AND APRIL CABINS WATER RECORDS (30480 GALLONS)

100510 GALLONS / 28 DAYS OF FEBRUARY = 3590 GPD
30480 GALLONS / 30 DAYS OF APRIL = 1016 GPD
$Q_{TOTAL-PARK-WATER-USAGE}$ = 4606 GPD

DIRECT RATIO EQUATION:

$$\frac{Q_{TCEQ-COMPONENT}}{Q_{TCEQ-TOTAL-PARK}} = \frac{Q_{COMPONENT}}{Q_{TOTAL-PARK-WATER-RECORDS}}$$

FOR SYSTEM 1 $Q_{TCEQ\ COMPONENT}$:

3 BEDROOM <2500 SQ. FT. Q = 240 GPD
OFFICE W/5 EMPLOYEES Q= 5 EMPLOYEES(4 GPD/ PERSON)=20 GPD
LAUNDRY ROOM W/ 4 WASHING MACHINES
Q= 4 WASHING MACHINES (200 GPD / MACHINE) = 800 GPD
3 CABINS (AS AN APARTMENT)
Q= 100 GPD/ CABIN (3 CABINS) = 300 GPD

$Q_{TCEQ\ COMPONENT}$ = 1360 GPD SYSTEM #1

FOR SYSTEM 2 $Q_{TCEQ\ COMPONENT}$:

4 CABINS (AS AN APARTMENT)
Q= 100 GPD/ CABIN (4 CABINS) = 400 GPD

Q = 60 GPD / BED (6 BEDS) = 360 GPD
SHOWER HOUSE Q = 1344 GPD (TOTAL BATH USAGE EQUALLY DIVIDED AMO[illegible] BOTH SHOWER HOUSES. SEE CALCULATIONS FOR EXPLANATION)

$Q_{TCEQ\ COMPONENT}$ = 2104 GPD SYSTEM #2

FOR SYSTEM 3 $Q_{TCEQ\ COMPONENT}$:

Q = 17 RV (40 GPD / RV) = 680 GPD
5 CABINS (AS AN APARTMENT)
Q= 100 GPD/ CABIN (5 CABINS) = 500 GPD
BATH HOUSE Q = 1344 GPD (TOTAL BATH USAGE EQUALLY DIVIDED AMONGST BOTH S[illegible]WER HOUSES. SEE CALCULATIONS FOR EXPLANATION)

[illegible] GPD SYSTEM #3

FOR SYSTEM 4 $Q_{TCEQ\ COMPONENT}$:

10 R[illegible]

[illegible]NT = 400 GPD

FOR SYSTEM 5 $Q_{TCEQ\ COMPONENT}$:

6 [illegible] GPD) = 240 GPD

[illegible]PONENT = 240 GPD SYST[illegible]

[illegible] HOUSE & SHOWER HOUSE:

RV Q= 28 GPD/ RV [illegible] = 924 GPD
CAMPSITES
CAMPSITES (2 PEOP[illegible] GPD / SHOWER) = 1400 GPD
MANCAMPS
3 BEDS (28 GPD)

[illegible]TAL = 2688 [illegible]
[illegible]HOUSE & SHOWER HOUSE
[illegible]HAN THE RECOMMENDED TCEQ FLOW

TOTAL FLOW FOR ENITRE PARK PER TCEQ:

[illegible] GPD + 2104 GPD + 2524 GPD + 400 GPD + 240 GPD= [illegible]8 GPD

DIRECT RATIO FOR SYSTEM 1 Q_{COMP}[illegible]:

$$\frac{1360\ GPD\ TCEQ\ COMPONENT}{6628\ TCEQ\ TOTAL} = \frac{Q\ COMPONENT}{4606\ TOTAL\ PARK\ WATER\ RECORDS}$$

Q PERMITTED COMPONENT = 946 GPD FOR SYSTEM #1

DIRECT RATIO FOR SYSTEM 2 [illegible]COMPONENT]:

$$\frac{2104\ GPD\ TCEQ\ COMPONENT}{} = \frac{Q\ COMPONENT}{}$$

[illegible]OS

Q PERMITTED COMPONENT = 1463 GPD FOR SYSTEM #2

DIRECT RATIO FOR SYSTEM 3 $Q_{COMPONENT}$:

$$\frac{2524\ GPD\ TCEQ\ COMPONENT}{6628\ TCEQ\ TOTAL} = \frac{Q\ COMPONENT}{4606\ TOTAL\ PARK\ WATER\ RECORDS}$$

Q PERMITTED COMPONENT = 1755 GPD FOR SYSTEM #3

DIRECT RATIO FOR SYSTEM 4 $Q_{COMPONENT}$:

$$\frac{400\ GPD\ TCEQ\ COMPONENT}{6628\ TCEQ\ TOTAL} = \frac{Q\ COMPONENT}{4606\ TOTAL\ PARK\ WATER\ RECORDS}$$

Q PERMITTED COMPONENT = 278 GPD FOR SYSTEM #4

DIRECT RATIO FOR SYSTEM 5 $Q_{COMPONENT}$:

$$\frac{240\ GPD\ TCEQ\ COMPONENT}{6628\ TCEQ\ TOTAL} = \frac{Q\ COMPONENT}{4606\ TOTAL\ PARK\ WATER\ RECORDS}$$

Q PERMITTED COMPONENT = 167 GPD FOR SYSTEM #5

Brandon,

Attached is the signed application from me. This job we are permitting the water records but sizing the systems to accommodate the TCEQ flow. The flow on the application is correct.

System 2&3 aren't installed yet. We are hoping to complete 4 & 5 and move on to the other 2 systems.

Thank you,
Kaeleigh

Permit of Authorization to Construct an On-Site Sewage Facility
Permit Valid For One Year From Date Issued

VOID

Permit Number: 113610

Issued This Date: 05/06/2022

This permit is hereby given to: Rebecca Creek Campgrounds

To start construction of a [illegible] sewage facility located at:

3360 TANGLEWOOD TRAIL
SPRING BRANCH, TX 78070

Subdivision: Charles Murhart Survey ABS No. 404
Unit: 0
Lot: 0
Block: 0
Acreage: 14.2300

APPROVED MINIMUM SIZES AS PER ATTACHED DESIGN

Type of System: Aerobic
Drip Irrigation

This permit gives permission for the construction of the above referenced on-site facility to commence. Installation must be completed by an installer holding a valid registration card from the Texas Commission on Environmental Quality (TCEQ). Installation and inspection must comply with current TCEQ and Comal County requirements.

Call (830) 608-2090 to schedule inspections.

****As a condition of this permit submittal a meter must be installed on the outflow line of the pump tank. The readings from this meter must be recorded on a daily basis and submitted to the Comal County Environmental Health Department once a month for 12 months from the date the License to Operate is issued. If at any time the daily meter reading exceeds the permitted flow rate this permit will be void and a new permit must be obtained.****

Street Name/Address 31660 Tanglewood Trail City Spring Branch Zip 78070

Type of Development

☐ Single Family Residential
Type of Construction (House, Mobile, RV, Etc.)
Number of Bedrooms
Indicate Sq Ft of Living

☒ Non-Single Family Residential
(Planning materials must show adequate area enabling the required and reserved for replacement units and disposal area)
Type of Facility
Offices, Factories, Churches, Parks - Indicate Number of Occupants
Restaurants, Lounges, Theaters - Indicate Number of Seats
Hotel, Motel, Hospital, Nursing Home - Indicate Number of Beds
Travel Trailer/RV Parks - Indicate Number of Spaces 12 RV sites
Miscellaneous

Estimated Cost of Construction: $ (Structure Only) N/A

VOID

Is any portion of the proposed OSSF located in the United States Army Corps of Engineers (USACE) flowage easement?

☐ Yes ☒ No (If yes, owner must provide approval from USACE for proposed OSSF improvements within the USACE flowage easement)

Source of Water ☒ Public ☐ Private Well

Are Water Saving Devices Being Utilized Within the Residence? ☒ Yes ☐ No

By signing this application, I certify that:
- The completed application and all additional information submitted does not contain any false information and does not conceal any material facts. I certify that I am the property owner or I possess the appropriate land rights necessary to make the permitted improvements on said property.
- Authorization is hereby given to the permitting authority and designated agents to enter upon the above described property for the purpose of site/soil evaluation and inspection of private sewage facilities..
- I understand that a permit of authorization to construct will not be issued until the Floodplain Administrator has performed the reviews required by the Comal County Flood Damage Prevention Order.
- I affirmatively consent to the online posting/public release of my e-mail address associated with this permit application, as applicable.

SITE EVALUATION AND CALCULATIONS

Site Evaluation:

Soil Texture:	Clay loam
Soil Structure:	Blocky
Soil Depth:	18" minimum
Restrictive Horizon:	At 18" min. from surface
Groundwater:	None encountered
Topography:	More than 2% slope on drainfield area

Determination: Site was determined to have a Class III soil. Due to the park layout and rock horizon an aerobic treatment unit followed by drip irrigation shall be installed.

VOID

Calculations:

System # [illegible] the [illegible]culated [illegible]w based o[illegible] water [illegible]ords [illegible]755 gpd [illegible] system shall be over de[illegible] to match [illegible] TCEQ d[illegible]nate[illegible] flow o[illegible]24 gpd [illegible]rence design 100-8497 f[illegible]ulations a[illegible]er sa[illegible] dev[illegible]hroughout.

Q = 2524 gpd

Two NuWater Model B-1500 aerobic treatment unit, or equal, shall be installed. A 2000 gallon pre-treatment tank and 4500 gallon equalization tank shall be installed preceding the aerobic treatment unit. Following the aerobic treatment unit shall be a 3000 gallon pump tank. The tank system shall be followed by a drip irrigation system. (Reference the System Layout) Chlorinator is required for water entering pump tank compartment. Liquid type chlorination shall be used.

Ra = **0.20 gal. / sq. ft. / day, (For a Class III soil)**

A = Q / Ra, A = (2524 gal. / day) / (0.20 gal. / sq. ft. / day) = **12,620 sq. ft.**

SITE EVALUATION AND CALCULATIONS

Calculations:

Emitter line shall be used which has emitters spaced at 2 foot intervals, and adjacent emitter lines shall also be spaced at 2 feet on center.

Required line length = A / 2 = (12,620 sq. ft. / 2 sq. ft. per foot) = **6310 feet**
6375' of drip line shall be installed as shown on the System Layout

A 1 1/2" SCH 40 PVC supply line shall be used from the ATU systems pump tank to the drainfield. A 1 1/2" SCH 40 PVC return line from the drainfield back to the pump tank shall be provided. The system shall be set up in accordance with NuWater spec[illegible]ions. (Co[illegible] manu[illegible] complet[illegible]ecific[illegible]eference the Syste[illegible]yout an[illegible]ails)

NOTE[illegible]R IN[illegible]LLER[illegible]pplicable):

Do not [illegible]n[illegible]ater so[illegible]r back-wa[illegible] sep[illegible]yste[illegible]

The TC[illegible]ws washing[illegible] to be[illegible]harg[illegible]e gray water system[illegible]s the water co[illegible]an wast[illegible]unni[illegible]ut separate from the septic system can prolong the life of the system.

A Netafim 1 1/2" "Super Filter" 200 mesh/55 micron, shall be installed in a riser in the outlet line of the pump tank compartment.

Connect the 1 1/2" "Super Filter" and assemble in accordance with manufacturers specifications..

Contact NuWater dealer for complete specifications. All required specifications may not be contained in this design.

THE INSTALLATION OF THE 4 PROPOSED SEPTIC SYSTEMS WILL DISTURB LESS THAN 5 ACRES. THEREFORE PER 30 TAC 213.21, A CONTRIBUTING ZONE PLAN IS NOT REQUIRED FOR THIS ACTIVITY.

LEGEND:
10' UTILITIES EASEMENT
DRIP SUPPLY LINE
DRIP RETURN LINE
SOIL EVALUATION POINTS

MANGOLD ENGINEERING COMPANY WILL NOT BE RESPONSIBLE FOR THE CONSEQUENCES OF THE USE OF ANY PART OF THE ENGINEERING OF THIS SEPTIC SYSTEM BEFORE THE ENGINEERING HAS BEEN COMPLETELY AND FINALLY APPROVED BY THE APPROPRIATE COUNTY AUTHORITY IN THE COUNTY FOR WHICH IT IS INTENDED. IF TEST HOLES WERE NOT PRESENT DURING THE SITE-EVALUATION, THE OWNER/INSTALLER SHALL BE RESPONSIBLE FOR DIGGING TEST HOLES AND CONTACTING MANGOLD ENGINEERING COMPANY PRIOR TO ANY USE OF THIS ENGINEERING DESIGN.

THIS EXISTING SYSTEM #1 IS GRAND FATHERED IN, AS OF 9-28-21 REFERENCE EMAIL FROM ROBERT BOYD, P.E., COMAL COUNTY ASSISTANT ENGINEER.

SITE NOTES:

ALL EXISTING UNDERGROUND UTILITIES SHALL BE LOCATED AMD MARKED BEFORE ANY EXCAVATION BEGINS.

EXISTING WATER LINE LOCATIONS ARE UNDETERMINED. SEE WATER CASING NOTE AS REQUIRED.

WHERE A WATER LINE IS CLOSER THAN 10' TO A WASTEWATER MAIN, THE WATER LINE SHALL BE CASED INSIDE OF A SCH 40 PVC PIPE SUCH THAT THE ENDS OF THE CASING ARE AT LEAST. 10' AWAY FROM THE WASTEWATER MAIN. IN ADDITION, IF THE LINES CROSS, THE [illegible]" ABOVE THE WASTEWATER MAIN.

WHERE DRAIN LINES PASS UNDER [illegible], THEY SHALL BE SCH 80 PVC OR THEY SHALL BE SLEEVED INSIDE [illegible] SCH 40 PVC PIPE WHICH IS AT LEAST TWO NOMINAL PIPE SIZES [illegible] LARGER THAN THE DRAIN LINE.

ALL ABANDONED SEPTIC TANKS SHALL BE LOCATED, [illegible]UMPED, BACKFILLED & CAVED-IN.

USE EXISTING SEWER LINES UNDER R.V. SITES WHERE [illegible]SIBLE.

A TWO-WAY CLEAN OUT SHALL BE INSTALLED BETWEEN [illegible] BUILDING AND AEROBIC TANKS.

WHEN CROSSING EASEMENT LINES, PERMISSION SHALL BE [illegible]ANTED BY THE EASEMENT HOLDER BEFORE ANY EXCAVATION BEGINS.

STANDARD NOTES:

1. SEPTIC TANK MUST BE A MINIMUM OF 50' FROM ANY [illegible]TER WELL. CLOSEST DISTANCE FROM ANY PART OF THE D[illegible]FIELD AREA TO A WATER WELL MUST BE 100' MINIMUM.
2. MINIMUM SETBACK OF SPRAY AREA FROM PROPERTY [illegible]E IS 20'.
3. MINIMUM SETBACK OF DRIP AREA FROM PROPERTY LI[illegible]S 5'.
4. MINIMUM SEPARATION DISTANCE BETWEEN SEPTIC TAN[illegible]R DRAINFIELD AREA AND WATER SUPPLY LINES IS 10'.
5. SETBACK OF SPRAY OR DRIP AREA FROM LAKES, STR[illegible]S, PONDS, AND RIVERS IS 50' MINIMUM.
6. SLOPE OF INFLOW LINE TO TANK IS [illegible] INCH PER FOO[illegible]UN. PIPE 4" SCH 40 PVC.
7. WHERE PARALLEL SEWER AND NEW WATER LINES ARE [illegible]SER THAN 9' THE REQUIREMENTS SPECIFIED IN TCEQ, SUB[illegible]PTER D, 290.44(e)(4)(A) SHALL BE STRICTLY FOLLOWED.
8. WHERE SEWER AND NEW WATER LINES CROSS, THE R[illegible]REMENTS SPECIFIED IN TCEQ, SUBCHAPTER D, 290.44(e)(4)(B) [illegible]LL BE STRICTLY FOLLOWED.
9. EACH SYSTEM SHALL BE INSPECTED BY THE COUNTY INSPE[illegible]R IN ACCORDANCE WITH CURRENT COUNTY INSPECTION PRO[illegible]URES.

PER COUNTY REQUIREMENTS, A FLOW METER SHALL BE INSTALL[illegible] ON THE SUPPLY LINE AND RET[illegible] LINE OF EACH AEROBIC UNIT FOLLOWED BY A DRIP IRRIGATIO[illegible] SYSTEM. FOR THE AEROBIC UNI[illegible] WITH SPRAY ONLY ONE METER SHALL BE INSTALLED ON THE SUPPLY LINE TO THE SPRINKLE[illegible] THE FLOW TO EACH SEPTIC SY[illegible]M SHALL BE METERED. EACH SYST[illegible] SHALL BE MONITORED, RECORDE[illegible]& SUBMITTED TO COMAL COUNTY [illegible]R ONE YEAR TO VERIFY NO MORE THAN THE PERMITTED FLOW IS [illegible]ED FOR EACH SYSTEM.

SITE EVALUATION AND CALCULATIONS

Calculations:

Emitter line shall be used which has emitters spaced at 2 foot intervals, and adjacent emitter lines shall also be spaced at 2 feet on center.

Required line length = A / 2 = (12,620 sq. ft. / 2 sq. ft. per foot) = **6310 feet**
6625' of drip line is installed as shown on the System Layout ASBUILT

A 1 1/2" SCH 40 PVC supply line shall be used from the ATU systems pump tank to the drainfield. A 1 1/2" SCH 40 PVC return line from the drainfield back to the pump tank shall be provided. The system shall be set up in accordance with NuWater specifications. (Contact manufacturer for complete specifications and reference the System Layout and details)

NOTES FOR INSTALLER (applicable):

Do not connect water softener back-wash to septic system.

The TCEQ allows washing machine water to be discharged into a separate gray water system unless water contains human waste. Laundry is water must separate from the septic system to prolong life of system.

A Netafim 1 1/2" "Super Filter" 200 mesh/55 micron, shall be installed in a riser in the outlet line of the pump tank compartment.

Connect the 1 1/2" "Super Filter" and assemble in accordance with manufacturer's specifications..

Contact NuWater dealer for complete specifications. All required specifications may not be contained in this design.

Sent from my iPhone

THE INSTALLATION OF THE 4 PROPOSED SEPTIC SYSTEMS WILL DISTURB LESS THAN 5 ACRES. THEREFORE PER 30 TAC 213.21, A CONTRIBUTING ZONE PLAN IS NOT REQUIRED FOR THIS ACTIVITY.

LEGEND:
10' UTILITIES EASEMENT
DRIP SUPPLY LINE
DRIP RETURN LINE
SOIL EVALUATION POINTS

THIS EXISTING SYSTEM #1 IS GRAND FATHERED IN, AS OF 9-28-21 REFERENCE EMAIL FROM ROBERT BOYD, P.E., COMAL COUNTY ASSISTANT ENGINEER.

MANGOLD ENGINEERING COMPANY WILL NOT BE RESPONSIBLE FOR THE CONSEQUENCES OF THE USE OF ANY PART OF THE ENGINEERING OF THIS SEPTIC SYSTEM BEFORE THE ENGINEERING HAS BEEN COMPLETELY AND FINALLY APPROVED BY THE APPROPRIATE COUNTY AUTHORITY IN THE COUNTY FOR WHICH IT IS INTENDED. IF TEST HOLES WERE NOT PRESENT DURING THE SITE-EVALUATION, THE OWNER/INSTALLER SHALL BE RESPONSIBLE FOR DIGGING TEST HOLES AND CONTACTING MANGOLD ENGINEERING COMPANY PRIOR TO ANY USE OF THIS ENGINEERING DESIGN.

SITE NOTES:

ALL EXISTING UNDERGROUND UTILITIES SHALL BE LOCATED AMD MARKED BEFORE ANY EXCAVATION BEGINS.

EXISTING WATER LINE LOCATIONS ARE UNDETERMINED. SEE WATER CASING NOTE AS REQUIRED.

WHERE A WATER LINE IS CLOSER THAN 10' TO A WASTEWATER MAIN, THE WATER LINE SHALL BE CASED INSIDE OF A SCH 40 PVC PIPE SUCH THAT THE ENDS OF THE CASING ARE AT LEAST. 10' AWAY FROM THE WASTEWATER MAIN. IN ADDITION, IF THE LINES CROSS, THE WATER LINE SHALL BE AT LEAST 6" ABOVE THE WASTEWATER MAIN.

WHERE DRAIN LINES PASS UNDER ROADWAYS, THEY SHALL BE SCH 80 [illegible] OF A SCH 40 PVC PIPE [illegible] LARGER THAN THE DRAIN LINE.

ALL ABANDONED SEPTIC TANKS SHALL BE LOCA[illegible]MPED, BACKFILLED & CAVED-IN.

USE EXISTING SEWER LINES UNDER R.V. SITES WHERE [illegible]BLE.

A TWO-WAY CLEAN OUT SHALL BE INSTALLED BETWEEN T[illegible]UILDING AND AEROBIC TANKS.

WHEN CROSSING EASEMENT LINES, PERMISSION SHALL BE G[illegible]D BY THE EASEMENT HOLDER BEFORE ANY EXCAVATION BEGINS.

STANDARD NOTES:

1. SEPTIC TANK MUST BE A MINIMUM OF 50' FROM ANY WA[illegible] WELL. CLOSEST DISTANCE FROM ANY PART OF THE DRAINF[illegible] AREA TO A WATER WELL MUST BE 100' MINIMUM.
2. MINIMUM SETBACK OF SPRAY AREA FROM PROPERTY LINE[illegible]20'.
3. MINIMUM SETBACK OF DRIP AREA FROM PROPERTY LINE IS[illegible]
4. MINIMUM SEPARATION DISTANCE BETWEEN SEPTIC TANK O[illegible] DRAINFIELD AREA AND WATER SUPPLY LINES IS 10'.
5. SETBACK OF SPRAY OR DRIP AREA FROM LAKES, STREAMS[illegible] PONDS, AND RIVERS IS 50' MINIMUM.
6. SLOPE OF INFLOW LINE TO TANK IS [illegible] INCH PER FOOT RU[illegible]IPE SCH 40 PVC.
7. WHERE PARALLEL SEWER AND NEW WATER LINES ARE CLOS[illegible] THE REQUIREMENTS SPECIFIED IN TCEQ, SUBCHAP[illegible]D, [illegible](4)(A) SHALL BE STRICTLY FOLLOWED.
8. WHERE SEWER AND NEW WATER LINES CROSS, THE REQUIR[illegible]NTS IN TCEQ, SUBCHAPTER D, 290.44(e)(4)(B) SHAL[illegible] FOLLOWED.
9. [illegible] SHALL BE INSPECTED BY THE COUNTY INSPECTOR[illegible] NCE WITH CURRENT COUNTY INSPECTION PROCEDU[illegible]

PER COUNTY REQUIREMENTS, A FLOW METER SHALL BE INSTALLED ON THE SUPPLY LINE AND RETURN LINE OF EACH AEROBIC UNIT FOLLOWED BY A DRIP IRRIGATION SYSTEM. FOR THE AEROBIC UNIT WITH SPRAY ONLY ONE METER SHALL BE INSTALLED ON THE SUPPLY LINE TO THE SPRINKLER. THE FLOW TO EACH SEPTIC SYSTEM SHALL BE METERED. EACH SYSTEM SHALL BE MONITORED, RECORDED & SUBMITTED TO COMAL COUNTY FOR ONE YEAR TO VERIFY NO MORE THAN THE PERMITTED FLOW IS USED FOR EACH SYSTEM.

ALL ELECTRICAL COMPONENTS SHOULD HAVE AN ELECTRICAL DISCONNECT WITHIN DIRECT VISION. ELECTRICAL DISCONNECTS MUST BE WEATHERPROOF (APPROVED FOR OUTDOOR USE) AND HAVE MAINTENANCE LOCKOUT PROVISIONS.

USE A LARGER TANK IF REQUIRED TO MEET MINIMUM STORAGE REQUIREMENTS.

CALCULATIONS TO DETERMINE PERMITTED FLOW FOR COMAL COUNTY:

THE PERMITTED FLOW FOR EACH SYSTEM IS BASED ON WATER RECORDS PROVIDED BY THE OWNER OVER AN ENTIRE YEAR. THE TCEQ DAILY FLOW FOR THE PARK SHALL BE USED TO SIZE EACH SYSTEM. A DIRECT RATIO WILL BE USED TO DETERMINE HOW THAT WATER IS DISTRIBUTED THROUGHOUT THE PARK FOR THE PERMIT APPLICATIONS. SEE CALCULATIONS BELOW.

MAXIMUM DAILY DEMAND FROM FEBRUARY LODGE WATER (100510 GALLONS) AND APRIL CABINS WATER RECORDS (30480 GALLONS)

100510 GALLONS / 28 DAYS OF FEBRUARY = 3590 GPD
30480 GALLONS / 30 DAYS OF APRIL = 1016 GPD
$Q_{TOTAL-PARK-WATER-USAGE}$ = 4606 GPD

DIRECT RATIO EQUATION:

$$\frac{Q_{TCEQ-COMPONENT}}{Q_{TCEQ-TOTAL-PARK}} = \frac{Q_{COMPONENT}}{Q_{TOTAL-PARK-WATER-RECORDS}}$$

3 BEDROOM <2500 SQ. FT. Q = 240 GPD
OFFICE W/5 EMPLOYEES Q= 5 EMPLOYEES(4 GPD/ PERSON)=20 GPD
LAUNDRY ROOM W/ 4 WASHING MACHINES
Q= 4 WASHING MACHINES (200 GPD / MACHINE) = 800 GPD
3 CABINS (AS AN APARTMENT)
Q= 100 GPD/ CABIN (3 CABINS) = 300 GPD

$Q_{TCEQ\ COMPONENT}$ = 1360 GPD SYSTEM #1

FOR SYSTEM 2 $Q_{TCEQ\ COMPONENT}$:

4 CABINS (AS AN APARTMENT)
Q= 100 GPD/ CABIN (4 CABINS) = 400 GPD
6 BED MANCAMP WITH 1 COMMON BATHROOM (SIZED AS HOTEL ROOM)
Q = 60 GPD / BED (6 BEDS) = 360 GPD
SHOWER HOUSE Q = 1344 GPD (TOTAL BATH USAGE EQUALLY DIVIDED AMONGST BOTH SHOWER HOUSES. SEE CALCULATIONS FOR EXPLANATION)

$Q_{TCEQ\ COMPONENT}$ = 2104 GPD SYSTEM #2

Good Morning,

The images and in[illegible] for the work carried out by the certified plumber have been received (refer to the attached ema[illegible] Th[illegible]e plan provided by Kaeleigh Crandall should illustrate the section installed by the licensed plumber. [illegible]icense to Operate (LTO) will be granted after all inspections are completed and the erosion issue is reso[illegible]ed. As per the email mentioned below, if a different installer assumes responsibility for the job, we would prefer to conduct an additional operational inspection to ensure everything is functioning as it should.

Thank You,

Subject: Rebecca Creek plumbing lines installation for septic tanks

Brandon,

I am writing to inform you that all the plumbing lines leading up to the septic tanks at the property located at Rebecca Creek Campgrounds have been installed by a licensed plumber, as requested. The plumbers' names are Cornel Martinez & Rene Reyes and the license number is #56117. They have followed all the required codes and standards for the installation and they've given me an invoice proving completion of his work.

As evidence that the work was completed, I have attached pictures of the plumbing lines and the plumber's invoice to this email. Please advise if this is the necessary documentation needed to obtain our LTOs. I appreciate your cooperation and prompt response in this matter.

Re: Rebecca Creek Campgrounds
14.23 acres, 3660 Tanglewood Trail
On-Site Sewage Facility (OSSF) Permits 113609 & 113610

Mr. Sutcliffe :

Our office conducted a site visit yesterday at the referenced property. For your situational awareness, I have attached pictures representative of our visit. Backfill materials have been washed away from the drip system leaving the system exposed and no longer compliant with OSSF Regulations.

Also, it has come to our attention that the daily water meter readings as required by the Special Permit Conditions for Permits 113611 & 113612 (see attached) have not been submitted. Please submit the required daily meter readings from mid-February 2023 to present.

Thank you,

Subject: RE: Rebecca Creek Sys 3 asbuilt

Good Morning,

File has been updated.

1. Provide a spec sheet for the existing 1000 Gallon dual compartment septic tank.
    a. How is this tank being plumbed into the system?
    b. TAC 285.32- Provide documentation that this tank was installed level and is watertight and meets the ASTM Standard C1227.
    c. If the above can not be provided this will be treated as a new tank and will need to be inspected as such.
2. The existing tank being converted does not have enough reserve capacity.
    a. Per 285.34(b)(2) all pump tanks need to have a minimum of 1/3 day reserve capacity.
3. Revise Accordingly and resubmit.

Thank You,

Note: Beginning January 1, 2024 our reinspection fees will be changing to $150.00. Permit fee includes 3 inspections, $150 each additional inspection

SPECIAL FLOOD HAZARD AREAS
- Without Base Flood Elevation (BFE) *Zone A, V, A99*
- With BFE or Depth *Zone AE, AO, AH, VE, AR*
- Regulatory Floodway

OTHER AREAS OF FLOOD HAZARD
- 0.2% Annual Chance Flood Hazard, Areas of 1% annual chance flood with average depth less than one foot or with drainage areas of less than one square mile *Zone X*
- Future Conditions 1% Annual Chance Flood Hazard *Zone X*
- Area with Reduced Flood Risk due to Levee. See Notes. *Zone X*
- Area with Flood Risk due to Levee *Zone D*

OTHER AREAS
- NO SCREEN Area of Minimal Flood Hazard *Zone X*
- Effective LOMRs
- Area of Undetermined Flood Hazard *Zone D*

GENERAL STRUCTURES
- Channel, Culvert, or Storm Sewer
- Levee, Dike, or Floodwall

OTHER FEATURES
- 20.2 / 17.5 Cross Sections with 1% Annual Chance Water Surface Elevation
- Coastal Transect
- Base Flood Elevation Line (BFE)
- Limit of Study
- Jurisdiction Boundary
- Coastal Transect Baseline
- Profile Baseline
- Hydrographic Feature

WARRANTY DEED WITH VENDOR'S LIEN

NOTICE OF CONFIDENTIALITY RIGHTS: IF YOU ARE A NATURAL PERSON, YOU MAY REMOVE OR STRIKE ANY OR ALL OF THE FOLLOWING INFORMATION FROM ANY INSTRUMENT THAT TRANSFERS AN INTEREST IN REAL PROPERTY BEFORE IT IS FILED FOR RECORD IN THE PUBLIC RECORDS: YOUR SOCIAL SECURITY NUMBER OR YOUR DRIVER'S LICENSE NUMBER.

Date: April 15, 2021

Grantor: RAFAEL DE LEON, an unmarried man

Grantor's Address: 3660 Tanglewood Trl Spring Branch, TX 78070

Grantee: REBECCA CREEK CAMPGROUNDS, LLC

Grantee's Address: 3660 Tanglewood Trl, Spring Branch, TX 78070

Consideration: TEN AND NO/100 DOLLARS ($10.00) and other good and valuable consideration, and a note of even date herewith, executed by Grantee, payable to the order of Grantor (the "Note"). It is secured by a vendor's lien retained in this deed and by a deed of trust of even date from Grantee to MATTHEW J. BADDERS, Trustee.

Property (including any improvements):

Tract 1: Being **14.23 acres** of land out of the Charles Murhardt Survey, Abstract No. 404, Comal County, Texas, and being further described by metes and bounds in **Exhibit "A"** attached.

Tract 2: Being **2.0 acres** of land out of the Charles Murhardt Survey, Abstract No. 404, Comal County, Texas, and being further described by metes and bounds in **Exhibit "B"**, attached.

Reservations from Conveyance; Exceptions to Conveyance and Warranty:

This conveyance is made and accepted subject to conditions, restrictions, and easements appearing of record, if any, in Comal County, Texas, which affect the hereinabove described property; and

Conveyance:

Grantor, for the Consideration and subject to the Reservations from Conveyance and Exceptions to Conveyance and Warranty, grants, sells, and conveys to Grantee the Property, together with all and singular the rights and

appurtenances thereto in any way belonging, to have and hold it to Grantee and Grantee's heirs, successors, and assigns forever. Grantor binds Grantor and Grantor's heirs and successors to warrant and forever defend all and singular the Property to Grantee and Grantee's heirs, successors, and assigns against every person whomsoever lawfully claiming or to claim the same or any part thereof, except as to the Reservations from Conveyance and the Exceptions to Conveyance and Warranty.

The vendor's lien against and superior title to the Property are retained until each note described is fully paid according to its terms, at which time this deed will become absolute.

This conveyance is made **subject to** the prior lien ("Underlying Lien") of a deed of trust recorded as Instrument Number 201506025975, Real Property Records of Comal County, Texas, to EDWARD L. LETTE, Trustee thereunder, which secures payment of a promissory note ("Underlying Lien Debt") in the original principal amount of FOUR HUNDRED AND SIXTY-FIVE THOUSAND DOLLARS ($465,000.00). Grantee in this deed does not assume payment of that Underlying Lien Debt; provided, however, that any payments advanced by Grantee applied directly to the Underlying Lien Debt principal shall be applied to reduce the principal balance of the Note. As further consideration Grantor promises to keep and perform all of the covenants and obligations of the grantor named in the Underlying Lien deed of trust and to indemnify, defend, and hold Grantee harmless against any damages caused by Grantor's breach of its obligation under the Underlying Lien Debt and related documents, as long as Grantee is not in default on the Underlying Lien Debt and documents relating to it.

When the context requires, singular nouns and pronouns include the plural.

EXECUTED this the 15 day of April, 2021.

METES & BOUNDS DESCRIPTION

OF A 14.23 (CALLED 14.15) ACRE TRACT OF LAND OUT OF THE CHARLES MURHARDT SURVEY, ABSTRACT NO. 404, COMAL COUNTY, TEXAS, BEING THE SAME TRACT OF LAND AS DESCRIBED IN A DEED FROM ROEDERER ENTERPRISES, LLC TO RICHARD ROEDERER IN DOCUMENT NO. 200906004161, OFFICIAL PUBLIC RECORDS OF COMAL COUNTY, TEXAS, SAID TRACT BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:

BEGINNING at a found ½" iron rod in the cul-de-sac of Tanglewood Trail (a 50' Public R.O.W.) for the most westerly northeast corner of the herein described tract, the southeast corner of Lot 1R and 5, Cypress Cove Subdivision Section One, as recorded in Vol. 1, Pg. 45, Map and Plat Records of Comal County, Texas, said rod being a point of curvature;

THENCE along and with a non-tangent curve to the left with the following parameters:

Radius: 67.00 feet
Arc Length: 130.98 feet
Chord Length: 111.10 feet
Chord Bearing: South 73°24'34" East
Delta Angle: 112°00'24"
To a set ½" iron rod for an angle point, the northwest corner of a 30' Ingress-Egress Easement as recorded in Vol. 296, Pg. 130, Deed Records of Comal County, Texas, the northwest corner of a called 1.31 acre tract as described in a deed to Chapel in the Cove recorded in Vol. 334, Pg. 331, Deed Records of Comal County, Texas;

THENCE along and with said easement, South 48°57'00" East, a distance of 35.73 feet to a set ½" iron rod for a point of curvature;

THENCE along and with a tangent curve to the left with the following parameters:

Radius: 221.50 feet
Arc Length: 93.17 feet
Chord Length: 92.48 feet
Chord Bearing: South 61°00'00" East
Delta Angle: 24°06'00"
To a set ½" iron rod for a point of reverse curvature;

THENCE along and with a tangent curve to the right with the following parameters:

Radius: 205.27 feet
Arc Length: 196.27 feet
Chord Length: 188.88 feet
Chord Bearing: South 45°39'30" East
Delta Angle: 54°47'00"
To a set ½" iron rod for a point of tangency;

THENCE continuing along and with said easement, South 20°25'31" East, a distance of 388.07 feet (called South 18°16'00" East, a distance of 399.55 feet) to a set ½" iron rod for an angle point of the herein described tract, a point in the north boundary line of Water Plant No. 1, as recorded in Vol. 296, Pg. 125, Deed Records of Comal County, Texas;

THENCE along and with the common boundary line of the herein described tract and said Water Plant No. 1, the following courses and distances:

South 61°41'00" West, a distance of 31.53 feet to a set ½" iron rod for an angle point of the herein described tract, the northwest corner of said Water Plant No. 1;

South 28°50'00" East, a distance of 59.77 feet to a set ½" iron rod for an angle point of the herein described tract, the southwest corner of said Water Plant No. 1;

North 62°20'00" East, a distance of 60.12 feet to a set ½" iron rod for an angle point of the herein described tract, the southeast corner of said Water Plant No. 1;

North 27°02'52" West, a distance of 60.46 feet to a set ½" iron rod for an angle point of the herein described tract, the intersection of said 30' easement and said Water Plant No. 1;

THENCE along the common boundary of the herein described tract and said 1.31 Acre Tract, the following courses and distances:

North 18°16'00" West, a distance of 139.52 feet to a found ½" iron rod for an angle point;

South 45°40'30" East, a distance of 57.57 feet (called South 45°39'00" East, a distance of 57.53 feet) to a found ½" iron rod for an angle point;

South 51°41'46" East, a distance of 107.75 feet (called South 51°48'00" East, a distance of 107.56 feet) to a found ½" iron rod for an angle point;

North 05°47'32" West, a distance of 113.27 feet (called North 05°53'40" West, a distance of 113.05 feet) to a found ½" iron rod for an angle point;

North 11°48'30" West, a distance of 143.52 feet (called North 11°43'40" West, a distance of 143.30 feet) to a found ½" iron rod for an angle point;

North 07°28'24" West, a distance of 190.98 feet (called North 07°27'40" West, a distance of 191.21 feet) to a found ½" iron rod for an angle point;

North 11°18'10" West, a distance of 183.08 feet (called North 11°20'40" West, a distance of 183.01 feet) to a found ½" iron rod for the most easterly northwest corner of the herein described tract, an angle point of said 1.31 Acre Tract;

North 89°29'40" East, a distance of 377.90 feet (called North 89°29'58" East, a distance of 378.05 feet) to a found pipe for the northeast corner of the herein described tract, the most easterly southeast corner of said 1.31 Acre Tract, a point in the banks of the Guadalupe River (Canyon Lake);

THENCE along and with the meanders of said River, the following courses and distances:

South 00°31'15" East, a distance of 250.63 feet (called South 00°30'00" East, a distance of 250.48 feet) to a found concrete monument for an angle point;

South 09°59'06" East, a distance of 550.91 feet (called South 09°59'33" East, a distance of 550.70 feet) to a found ½" iron rod for the southeast corner of the herein described tract;

South 78°35'52" West, a distance of 60.88 feet to a point of reference for an angle point;

South 59°51'12" West, a distance of 527.23 feet (called South 59°48'24" West, a distance of 527.36 feet) to a found ½" iron rod for the southwest corner of the herein described tract, the most easterly corner of Lot 123, Cascada at Canyon Lake Unit 2, as recorded in Doc. No. 201203035725, Official Public Records of Comal County, Texas;

THENCE with the common boundary of the herein described tract and said Cascada Tract, North 33°44'42" West, a distance of 663.84 feet (called North 33°45'26" West, a distance of 663.95 feet) to a found ½" iron rod for an angle point;

THENCE continuing along and with said boundary, North 29°11'00" West, a distance of 513.55 feet (called North 29°11'00" West, a distance of 513.74 feet) to a found 60d nail for the northwest corner of the herein described tract, the southwest corner of said Lot 1R and Lot 5, Cypress Cove Section One;

THENCE along and with the common boundary of the herein described tract and said Lot 1R and 5, North 89°58'56" East, a distance of 166.95 feet (called East, a distance of 167.08 feet) to the **POINT OF BEGINNING** and containing 14.23 acres, more or less.

STATE OF TEXAS §

June 25, 2015

COUNTY OF BEXAR §

It is hereby certified that the above description was prepared from an actual survey on the ground of the described tract made under my supervision.

Roy John Ronnfeldt,

EXHIBIT "B"

FIELD NOTES DESCRIBING
2.0 ACRES OF LAND
IN COMAL COUNTY, TEXAS

Being 2.0 acres of land situated within the Charles Murhardt Survey Number 48, Abstract 404, Comal County, Texas. Said 2.0 acres of land being that same property, called Tract 2, as described in Warranty Deed of Assumption dated September 13, 1983, Grantor: Howard D. Spandau, Grantee: James H. Boriack and wife, Calla G. Boriack, recorded in volume 352, page 17 of the Deed Records of Comal County, Texas. A plat of survey has been prepared to accompany these field notes. The bearings recited herein are based on the hereinabove Tract 2 recorded in volume 352, page 17. Said 2.0 acres of land being more particularly described as follows:

BEGINNING at a found iron pin being the northwest corner of this herein described 2.0 acres of land, from which a found iron pin being the west corner of Lot 82, Cypress Cove Subdivision, Section 5, bears, as a reference, North 30°18'22" West, 731.34 feet. Said Cypress Cove Subdivision, Section 5, being as recorded in volume 1, page 77 of the Map and Plat Records of Comal County, Texas;

THENCE North 87°00'16" East, 298.86 feet to a found iron pin being the northeast corner of this herein described 2.0 acre tract of land;

THENCE South 02°44'09" East, (record bearing South 02°59'30" East), 220.89 feet to a found iron pin being the southeast corner of this herein described 2.0 acre tract of land;

THENCE South 53°12'59" West, 69.96 feet to a found iron pin;

THENCE South 66°59'51" West, (basis of bearings), 256.34 feet to a found iron pin being the southwest corner of this herein described 2.0 acre tract of land;

THENCE North 02°48'19" West, (record bearing North 02°59'30" West), 347.30 feet to the Place of Beginning and containing 2.0 acres of land in Comal County, Texas according to an actual survey made on the ground under my supervision on April 14, 2004.

Service Results

System 1 (the closest system to the front of the property) is the reason we were called out. The county inspector came by on a nuisance call from the nearby church. System 1 was overflowing onto the church property. County inspector also noted that many lids were missing screws.
Upon arrival, customer had already pulled out and cleaned filters, allowing to the system to pump down and resume normal activity. I confirmed that floats and timer were functional as well. If drainage problem persists (assuming the clogged filters were not the culprit), the reason will be due to drain field lines running to close to the road. This means the solution will be to re position and design the drain field.

System 2 is in the middle of the rv park. System 2 has no power running to the EQ tanks control panel. Determined problem to be a resulted of blown wiring inside the conduit. Customer confirmed that they reached out to an electrician and will run new power lines to control panel to fix problem.

System 3 is the bottom left system on the topography map listed in county permit records. This system was off upon arrival. It was determined that some of the local kids turned system off on accident. Upon supplying power to system, noted that filters were clogged. Drip filter was cleaned. Pump filter still needs to be pulled out and cleaned. Customer confirmed that they are going to use a sump pump to get water levels down so they can pull out and clean pump

filter.

System 4 is bottom right on topography map.
Nothing notably wrong with system 4 at the moment.

Service fee
95$

Next inspection should be due in July/august.

Maintenance Contract

THIS CONTRACT is made and entered into on July 8th 2025, by and between Valdes Drilling LLC (the "Service Company"), whose address is 11235 US HWY 181 S, San Antonio, Texas 78223 and Rebecca Creek Campgrounds ("Customer"), whose address is 3660 Tanglewood Trl, Spring Branch TX 78070. System #3 (113610)

WHEREAS Service Company is a company engaged in the business of servicing and maintaining Commercial and residential septic installations, and maintenance providing tanks. and is willing to provide such services to Customer as per the terms herein.

1. 12 inspections a year/service calls (at least one every month), for a total of 12 over the one yearnperiod including inspection, adjustment and servicing of the mechanical, electrical and other applicable component parts to ensure proper function. This includes inspecting the control panel, air pumps, air filters, diffuser operation. Any alarm situation affecting the proper function of the Aerobic process will be addressed within a 48-hour time Frame. Repair work on non-warranty parts will include price for parts & labor. The prices will be quoted before the work is performed.

2. An effluent quality inspection consisting of a visual check for color, turbidity, scum overflow and examination for odors.

3. If any improper operation is observed, which cannot be corrected at the time of the service visit, you will be notified immediately in writing of the conditions and estimated date of correction.

5. Any additional visits, inspections or sample collection required by specific Municipalities, Water/River Authorities, and County Agencies the TCEQ or any other authorized regulatory agency in your jurisdiction will be covered by this policy.

IMPORTANT: The Homeowners Manual must be strictly followed or warranties are subject to invalidation. Pumping of sludge build-up, repairs/ labor and materials, or any abuse of the system is not covered by this policy and will result in additional charges.

ACCESS BY CONTRACTOR

The Contractor Or anyone authorized by the Contractor may enter the property at reasonable times without prior notice for the purpose of the above described Services. The contractor may access the System components including the tanks by means of excavation for the purpose of evaluations if necessary.

2. Trained Employees

Trained personnel directly employed and supervised by the Service Company will perform all services required by the terms of this Contract. The Service Company agrees that each of its employees will be properly qualified and will use reasonable care in the performance of his or her duties.

3. Working Hours

(a) The services required of the Service Company under this Contract, including emergency service, shall be performed during the regular working hours of its regular working days, consisting of Monday to Saturday, Anytime, except as provided in (b) immediately below.

(b) If the Customer requests that the Service Company perform any of its services at times other than during its regular working hours, then for the services performed outside the regular working hours ("overtime hours"), the Customer shall be charged at $200.00 per hour as adjusted periodically to compensate for changes in the cost of labor.

4. Contract Price

(a) The Customer shall pay the Service Company at the rate of $950.00 (one time payment). for the one year of service to be performed under this Contract.

(b) The amount specified in (a) above shall be adjusted annually to reflect any changes in the Service Company's cost of labor. 0 percentage of the contract price shall be increased or decreased on each anniversary of the commencement date of service under this Contract with the percentage of increase or decrease in the straight-time hourly cost (which means the straight-time hourly labor rate, including fringe benefits) for the month within which the anniversary of the commencement of service under this Contract falls as compared with the straight-time hourly cost for the month within which the commencement date of service under this Contract falls.

(c) The amount specified in (a) above shall be adjusted annually to reflect any changes in the costs of the parts, equipment, and materials supplied by the Service Company under this Contract. 5 percentage of the contract price shall be increased or decreased on each anniversary of the commencement date of service under this Contract by the percentage of increase or decrease in the costs of the parts, equipment, and materials.(d)

6. Term of Contract

The term of this Contract shall commence on the start date of signature date and shall continues in full force and effect until it is terminated. Either party, by giving 7 days' written notice to the other party, may terminate this Contract either at the completion. or at the end of any subsequent year. In any event, this Contract shall be in effect for a minimum of 1 year.

7. Miscellaneous Provisions

(a) Applicable Law: This Contract shall be construed under and in accordance with the laws of the Texas, and all obligations of the parties created under this Contract are performable in Comal County, Texas.

(b) Parties Bound: This Contract shall be binding on and inure to the benefit of the parties to this Contract and their respective heirs, executors, administrators, legal representatives, successors and assigns as permitted by this Contract.

(c) Legal Construction: In the event any one or more of the provisions contained in this Contract shall for any reason be held invalid, illegal, or unenforceable in any respect, that invalidity, illegality, or unenforceability shall not affect any other provision. This Contract shall be construed as if the invalid, illegal, or unenforceable provision had never been contained in it.

(d) Prior Contracts Superseded: This Contract constitutes the sole and only Contract of the parties and supersedes any prior understandings or written or oral Contracts between the parties respecting the subject matter of this Contract.

(e) Amendments. This Contract may be amended by the parties only by a written Contract.

(f) Attorneys' Fees: If any action at law or in equity is brought to enforce or interpret the provisions of this Contract, the prevailing party will be entitled to reasonable attorneys' fees in addition to any other relief to which that party may be entitled.

8. Signatures

This Contract shall be signed on behalf of Valdes Drilling LLC by Julio Valdes #MP0002736, its Owner, and on behalf of Rebecca Creek Campgrounds, Property Owner: Michelle.
